

16 TYPES OF CYBERSECURITY

1. Network Security

- Protects networks from unauthorized access and threats.
- Examples: Firewalls, VPNs, IDS/IPS

2. Cloud Security

- Secures data and apps in cloud environments.
- Examples: Data encryption, Access controls, CSPM, CWPP

3. Application Security

- Prevents vulnerabilities in software and applications.
- Examples: Secure coding, Pen testing, WAFs

4. Endpoint Security

- Secures devices like computers and smartphones.
- Examples: Antivirus, EDR, DLP

5. Data Security

- Protects sensitive data from breaches and misuse.
- Examples: Encryption, Masking, Access controls

6. Identity & Access Management (IAM)

- Manages who has access to what.
- Examples: MFA, RBAC, PAM

7. Mobile Security

- Defends smartphones and tablets from threats.
- Examples: MDM, MTD, App sandboxing

8. IoT Security

- Protects smart and connected devices.
- Examples: Device authentication, Network segmentation

9. Critical Infrastructure Security

- Secures essential services and national systems.
- Examples: SCADA & ICS protection, Intrusion detection

10. Operational Technology (OT) Security

- Protects industrial systems and physical processes.
- Examples: PLC protection, OT traffic monitoring

11. Security Awareness Training

- Educates users to prevent cyber incidents.
- Examples: Phishing simulations, Policy training

12. Incident Response

- Manages cyberattacks and system recovery.
- Examples: Response plans, Forensic analysis

13. Vulnerability Management

- Identifies and fixes security weaknesses.
- Examples: Scanning, Pen testing, Patch management

14. Threat Intelligence

- Tracks and analyzes evolving cyber threats.
- Examples: Threat feeds, Malware analysis

15. Email Security

- Protects against phishing and spam attacks.
- Examples: Spam filters, Email encryption

16. Wireless Security

- Secures Wi-Fi and wireless communication.
- Examples: WPA3, Rogue access point detection

Subcommittee on Cybersecurity, Infrastructure Protection, and Security Technologies, 2013 *Emerging Cyber Threats to the United States* Cybersecurity, Infrastructure Protection, and Security Technologies of the Committee on Homeland Security House of Representatives Subcommittee, 2017-05-05 The United States faces evolving cybersecurity threats from nation states such as China Russia North Korea and Iran as well as cyber threats from criminal organizations and terrorist groups such as ISIS These actors continue to develop and build more sophisticated cyber capabilities These hackers now pose an even greater threat to the U S homeland and critical infrastructure Cybersecurity more than ever is National security In 2015 the U S was the victim of one of the most significant cyber attacks in its history The breach at the Office of Personnel Management exposed the personal and security clearance information of 21 5 million current and former Government employees In 2014 North Korea conducted a cyber attack on Sony Pictures that not only destroyed computers but also was intended to stifle free speech and threaten American ideals The Obama administration s lack of proportional responses to these cyber attacks has signaled to the world that there are no real consequences for such actions Without a comprehensive National cybersecurity strategy that establishes deterrence the future could bring an increasing number of adversaries that are willing to conduct cyber attacks against the United States

Cybersecurity United States. Congress. House. Committee on Oversight and Government Reform. Subcommittee on Information Technology, 2015 [Cybersecurity](#) Zach Webber, 2018-11-03 This Book will teach you on how to Secure your System from Potential Cyberthreat Each week it seems that some major corporation or another is having serious issues thanks to the leaks of some malicious hacker Hearing stories like this can make it seem difficult if not impossible for

individuals and smaller organizations to ensure their own cybersecurity to keep their own information private after all if the big guys can't manage then it can be hard to see the point While everyone knows that they need to exhibit some level of caution when interacting with the online world with the bounds of technology changing all the time this can be easier said than done Luckily this is where this book comes in to discuss the types of cybersecurity you should care about and how to put them to use for you in a way that is proven to be effective in both the short and the long term So what are you waiting for Take control of your technological future and buy this book today Inside you will find Easy ways to identify potential security threats at a glance Top cyber threats and how to stop them in their tracks Ways to put the world's crippling shortage of cybersecurity professionals to work for you Tips for ensuring your personal cybersecurity is up to snuff Special considerations to keep in mind when keeping your smart devices secure Understand the difference between the Internet and the web Learn the basic security measures to protect sensitive data Explore the several types of identity theft Discover how to keep social media accounts safe and secure Get a glimpse into the future of cybersecurity and what we can expect from it And more The book considers the problems of related to cyber security in the individual as well as the organizational setting Cyber security is essential to the organization considering the growing technological dependencies that organizations are continuously facing The book considers the nature of threats of cyber crime from hacking to data manipulation The text also considers intrusions related to corruption of information and its theft where the organization suffers from loss of crucial data Conversely there is data manipulation where the information is corrupted without the knowledge of the users in the organization The book tackles the methods of dealing with these types of intrusions and how to mitigate risk through policy changes These policies are known as risk management framework for the organizations to secure their data from the basic levels to advanced security settings These include the steps for cyber security planning maturity addressing process risks and elements related to personnel vulnerabilities Technological risks form the last part of the book as advancing processes need to be considered for the future of cyber security in organizations

Cybersecurity and Homeland Security Lin V. Choi, 2005 Cybersecurity refers to three things measures to protect information technology the information it contains processes and transmits and associated physical and virtual elements which together comprise cyberspace the degree of protection resulting from application of those measures and the associated field of professional endeavor Virtually any element of cyberspace can be at risk and the degree of interconnection of those elements can make it difficult to determine the extent of the cybersecurity framework that is needed Identifying the major weaknesses in U S cybersecurity is an area of some controversy the defense against attacks on computer systems and associated infrastructure has appeared to be generally fragmented and varying widely in effectiveness

Accountability Office, 2018-05-14 CYBERSECURITY Threats Impacting the Nation **Cybersecurity** Edward C. Liu, Gina Stevens, Kathleen Ann Ruane, Alissa M. Dolan, Richard M. Thompson, II, 2012-07-09 The federal government's role in protecting U.S. citizens and critical infrastructure from cyberattacks has been the subject of recent congressional interest. Critical infrastructure commonly refers to those entities that are so vital that their incapacitation or destruction would have a debilitating impact on national security, economic security, or the public health and safety. This report discusses selected legal issues that frequently arise in the context of recent legislation to address vulnerabilities of critical infrastructure to cyber threats, efforts to protect government networks from cyber threats, and proposals to facilitate and encourage sharing of cyber threat information among private sector and government entities. This report also discusses the degree to which federal law may preempt state law. It has been argued that in order to ensure the continuity of critical infrastructure and the larger economy, a regulatory framework for selected critical infrastructure should be created to require a minimum level of security from cyber threats. On the other hand, others have argued that such regulatory schemes would not improve cybersecurity while increasing the costs to businesses, expose businesses to additional liability if they fail to meet the imposed cybersecurity standards, and increase the risk that proprietary or confidential business information may be inappropriately disclosed. In order to protect federal information networks, the Department of Homeland Security (DHS) in conjunction with the National Security Agency (NSA) uses a network intrusion system that monitors all federal agency networks for potential attacks. Known as EINSTEIN, this system raises significant privacy implications, a concern acknowledged by DHS interest groups, academia, and the general public. DHS has developed a set of procedures to address these concerns, such as minimization of information collection, training, and accountability requirements, and retention rules. Notwithstanding these steps, there are concerns that the program may implicate privacy interests protected under the Fourth Amendment. Although many have argued that there is a need for federal and state governments and owners and operators of the nation's critical infrastructures to share information on cyber vulnerabilities and threats, obstacles to information sharing may exist in current laws protecting electronic communications or in antitrust law. Private entities that share information may also be concerned that sharing or receiving such information may lead to increased civil liability or that shared information may contain proprietary or confidential business information that may be used by competitors or government regulators for unauthorized purposes. Several bills in the 112th Congress would seek to improve the nation's cybersecurity and may raise some or all of the legal issues mentioned above. For example, H.R. 3523 (Rogers-Mich Ruppertsberger) addresses information sharing between the intelligence community and the private sector. H.R. 3674 (Lungren) includes provisions regarding the protection of critical infrastructure as well as information sharing. H.R. 4257 (Issa-Cummings) would require all federal agencies to continuously monitor their computer networks for malicious activity and would impose additional cybersecurity requirements on all federal agencies. S. 2102 (Feinstein) seeks to facilitate information sharing. S. 2105 (Lieberman) includes the information sharing

provisions of S 2102 as well as provisions relating to the protection of critical infrastructure and federal government networks S 2151 McCain and H R 4263 Bono Mack also addresses information sharing among the private sector and between the private sector and the government Many of these bills also include provisions specifically addressing the preemption of state laws
