Multi-objective Design Of Antennas Using Surrogate Models Slawomir Koziel, Adrian Bekasiewicz, 2016-11-18 This book addresses

computationally efficient multi objective optimization of antenna structures using variable fidelity electromagnetic simulations surrogate modeling techniques and design space reduction methods Based on contemporary research it formulates multi objective design tasks highlights related challenges in the context of antenna design and discusses solution approaches Specific focus is on providing methodologies for handling computationally expensive simulation models of antenna structures in the sense of their multi objective optimization Also given is a summary of recent developments in antenna design optimization using variable fidelity simulation models Numerous examples of real world antenna design problems are provided along with discussions and recommendations for the readers interested in applying the considered methods in their design work Written with researchers and students in mind topics covered can also be applied across a broad spectrum of aeronautical mechanical electrical biomedical and civil engineering It is of particular interest to those dealing with optimization computationally expensive design tasks and simulation driven design

Simulation-based Optimization Of Antenna Arrays Slawomir Koziel,Stanislav Ogurtsov,2019-02-13 The book addresses surrogate assisted design of antenna arrays in particular how surrogate models both data driven and physics based can be utilized to expedite procedures such as parametric optimization design closure statistical analysis or fault detection Algorithms and design frameworks are illustrated using a large variety of examples including real world printed circuit antenna and antenna array structures This unique compendium contains introductory materials concerning numerical optimization both conventional gradient based and derivative free including metaheuristics and surrogate based as well as a considerable selection of customized procedures developed specifically to handle antenna array problems Recommendations concerning practical aspects of surrogate assisted multi objective antenna optimization are also given The methods presented allow for cost efficient handling of antenna array design problems involving CPU intensive EM models in the context of design optimization and statistical analysis which will benefit both researchers designers and graduate students
