Developing Enterprise Chatbots Boris Galitsky, 2019-04-04 A chatbot is expected to be capable of supporting a cohesive and coherent conversation and be knowledgeable which makes it one of the most complex intelligent systems being designed nowadays Designers have to learn to combine intuitive explainable language understanding and reasoning approaches with high performance statistical and deep learning technologies Today there are two popular paradigms for chatbot construction 1 Build a bot platform with universal NLP and ML capabilities so that a bot developer for a particular enterprise not being an expert can populate it with training data 2 Accumulate a huge set of training dialogue data feed it to a deep learning network and expect the trained chatbot to automatically learn how to chat Although these two approaches are reported to imitate some intelligent dialogues both of them are unsuitable for enterprise chatbots being unreliable and too brittle The latter approach is based on a belief that some learning miracle will happen and a chatbot will start functioning without a thorough feature and domain engineering by an expert and interpretable dialogue management algorithms Enterprise high performance chatbots with extensive domain knowledge require a mix of statistical inductive deep machine learning and learning from the web syntactic semantic and discourse NLP ontology based reasoning and a state machine to control a dialogue This book will provide a comprehensive source of algorithms and architectures for building chatbots for various domains based on the recent trends in computational linguistics and machine learning The foci of this book are applications of discourse analysis in text relevant assessment dialogue management and content generation which help to overcome the limitations of platform based and data driven based approaches Supplementary material and code is available at <https://github.com/bgalitsky> relevance based on parse trees

Microsoft Conversational AI Platform for Developers Stephan Bisser, 2021 Build a chatbot using the Microsoft Conversational AI platform This book will teach you step by step how to save time and money by including chatbots in your enterprise strategy You will learn how to be proficient at every phase of development from collaboration on a chatbot in an end to end scenario to the first mock up phase and on through to the deployment and evaluation phases Microsoft built a cloud service ecosystem for running artificial intelligence workloads in public cloud scenarios and a robust AI platform that offers a broad range of services targeting conversational artificial intelligence solutions such as chatbots Building a chatbot requires not just developer coding skills but special considerations including input from business stakeholders such as domain matter experts and power users You will learn by example how to use a great set of tools and services to bridge the gap between business and engineering You will learn how to successfully morph business requirements

into actionable IT and engineering requirements You will learn about Bot Framework Composer which allows power users to initiate the building of a chatbot that can then be handed over to the development team to add capabilities through code Coverage is given to the process of sharing implementation tasks and workloads between power users who are using a low code or no code approach and developers who are building out the enhanced features for the chatbot What You Will Learn Understand Microsoft s comprehensive AI ecosystem and its services and solutions Recognize which solutions and services should be applied in each business scenario Discover no code low code approaches for building chatbots Develop chatbots using the conversational AI stack Align business and development for improved chatbot outcomes and reduced time to market This book is for developers and power users who want to build chatbots An understanding of the core principles of writing code NET or JavaScript for modern web applications is expected Stephan Bisser is a technical lead at Solvion and a Microsoft MVP for artificial intelligence In his current role he focuses on conversational AI Microsoft 365 and Azure He is passionate about the conversational AI platform and the cognitive services ecosystem Stephan and several other MVPs founded BotBuilderCommunity and SelectedTech community initiatives that focus on bot framework SDKs tools and tech topics related to Microsoft 365 and AI
