Calculated Risks How To Know When Numbers Deceive You:

Calculated Risks Gerd Gigerenzer, 2015-11-10 At the beginning of the twentieth century H G Wells predicted that statistical thinking would be as necessary for citizenship in a technological world as the ability to read and write But in the twenty first century we are often overwhelmed by a baffling array of percentages and probabilities as we try to navigate in a world dominated by statistics Cognitive scientist Gerd Gigerenzer says that because we haven't learned statistical thinking we don't understand risk and uncertainty In order to assess risk everything from the risk of an automobile accident to the certainty or uncertainty of some common medical screening tests we need a basic understanding of statistics Astonishingly doctors and lawyers don't understand risk any better than anyone else Gigerenzer reports a study in which doctors were told the results of breast cancer screenings and then were asked to explain the risks of contracting breast cancer to a woman who received a positive result from a screening The actual risk was small because the test gives many false positives But nearly every physician in the study overstated the risk Yet many people will have to make important health decisions based on such information and the interpretation of that information by their doctors Gigerenzer explains that a major obstacle to our understanding of numbers is that we live with an illusion of certainty Many of us believe that HIV tests DNA fingerprinting and the growing number of genetic tests are absolutely certain But even DNA evidence can produce spurious matches We cling to our illusion of certainty because the medical industry insurance companies investment advisers and election campaigns have become purveyors of certainty marketing it like a commodity To avoid confusion says Gigerenzer we should rely on more understandable representations of risk such as absolute risks For example it is said that a mammography screening reduces the risk of breast cancer by 25 percent But in absolute risks that means that out of every 1 000 women who do not participate in screening 4 will die while out of 1 000 women who do 3 will die A 25 percent risk reduction sounds much more significant than a benefit that 1 out of 1 000 women will reap This eye opening book explains how we can overcome our ignorance of numbers and better understand the risks we may be taking with our money our health and our lives

Adventures in Statistics Robert T. Stewart, 2024-07-08 This book is about how statistics play a role in life whether in business psychology biology economics or just about anything short of basket weaving You cannot make a trip to the doctor watch a football game or even go to the grocery store without some statistic staring you down Your age weight and cholesterol make you a high risk for diabetes the chance that your team will win the game is 12 5 percent 4 out of 5 dentists like this toothpaste What does it all mean Adventures in Statistics How We Live in a World of Numbers tells you what all those numbers mean But the book does not spit out a bunch of mathematical formulas the book tells stories Stories that explain statistics through popular

culture sports and history You're confused about that false positive warning in that drug commercial the 2007 comedy Juno explains how medical tests including pregnancy tests fail and why Not clear about what your coworkers are talking about when they say black swans the 1997 blockbuster Titanic makes sense of the concept Adventures in Statistics How We Live in a World of Numbers shows how professionals in medicine business politics sports and many other fields use numbers So just about everyone would gain from reading this book perhaps even basket weavers
