

Calculating Space and Power Density Requirements for Data Centers

White Paper 155

Revision 0

by Neil Rasmussen

Executive summary

The historic method of specifying data center power density using a single number of watts per square foot (or watts per square meter) is an unfortunate practice that has caused needless confusion as well as waste of energy and money. This paper demonstrates how the typical methods used to select and specify power density are flawed, and provides an improved approach for establishing space requirements, including recommended density specifications for typical situations.
