Intensification of Sorption Processes

Mahmood Reza Rahimi, Soleiman Mosleh, 2021-11-23 *Intensification of Sorption Processes: Active and Passive Mechanisms* introduces a number of selected advanced topics in sorption processes, process intensification, covering both theoretical and applicable aspects. The first part of the book is devoted to the study of sorption processes based on active mechanisms, including ultrasonic, microwave, high gravity, electrical, and magnetic fields, while the second part covers passive mechanisms like nanostructures and nanofluids, membrane supercritical fluids, and sorption processes based on geometry design and equipment structure. The focus of the book is on key aspects of novel process intensification technologies, processes, and equipment, i.e., absorption and adsorption, working principles, and design and applications. Covers all developments in the field of active and passive mechanisms for sorption processes. Introduces basic principles of any intensified sorption process along with details of equipment. Evaluates industrial upscaling, economic evaluation, justification, future opportunities, and challenges for each sorption process.

Green Chemistry for Dyes Removal from Waste Water Sanjay K.

Sharma, 2015-02-25 The use of synthetic chemical dyes in various industrial processes, including paper and pulp manufacturing, plastics dyeing, of cloth, leather treatment, and printing, has increased considerably over the last few years, resulting in the release of dye-containing industrial effluents into the soil and aquatic ecosystems. The textile industry generates high-polluting wastewaters, and their treatment is a very serious problem due to high total dissolved solids (TDS), presence of toxic heavy metals, and the non-biodegradable nature of the dyestuffs in the effluent. The chapters in this book provide an overview of the problem and its solution from different angles. These problems and solutions are presented in a genuinely holistic way by world-renowned researchers. Discussed are various promising techniques to remove dyes, including the use of nanotechnology, ultrasound, microwave, catalysts, biosorption, enzymatic treatments, advanced oxidation processes.

etc all of which are green Green Chemistry for Dyes Removal from Wastewater comprehensively discusses Different types of dyes their working and methodologies and various physical chemical and biological treatment methods employed Application of advanced oxidation processes AOPs in dye removal whereby highly reactive hydroxyl radicals are generated chemically photochemically and or by radiolytic sonolytic means The potential of ultrasound as an AOP is discussed as well Nanotechnology in the treatment of dye removal types of adsorbents for removal of toxic pollutants from aquatic systems Photocatalytic oxidation process for dye degradation under both UV and visible light application of solar light and solar photoreactor in dye degradation Surface-Functionalized Nanomaterials Tahir Rasheed, Chandrabhan Verma, 2025-06-02 The work describes synthesis characterization synthetic mechanisms and applications of functionalized nanomaterials Starting with surface functionalization of two dimensional carbon or polymer based materials it discusses nanomaterials for environmental applications such as adsorption and degradation of pollutants or wastewater treatment and energy storage such as batteries and supercapacitors *Chemical & Metallurgical Engineering* Eugene Franz Roeber, Howard Coon Parmelee, 1925 **Chemical Engineering Catalog**, 1919 *Nanotechnology for Environmental Remediation* Sabu Thomas, Merin Sara Thomas, Laly A. Pothan, 2022-08-02 Nanotechnology for Environmental Remediation Comprehensive resource on using nanomaterials to alleviate environmental pollution Contaminated land soil and water pose a threat to the environment and health These sites require immediate action in terms of assessing pollution and new remediation strategies Nanotechnology for Environmental Remediation helps readers understand the potential of nanotechnology in resolving the growing problem of environmental contamination The specific aim of this book is to provide comprehensive information relating to the progress in the development of functional nanomaterials and nanocomposites which are used for the environmental remediation of a variety of contaminants The work deals with the different aspects of nanotechnology in water air and soil contamination and presents the recent advances with a focus on remediation Core topics discussed in the work include Nanotechnology that can be used to engineer and tailor particles for specific environmental remediation applications A big picture conceptual understanding of environmental remediation methods for researchers environmentalists and professionals involved in assessing and developing new nano based strategies A detailed approach towards the different remediation procedures by various nanomaterials such as metal nanoparticles polymeric nanoparticles carbon nanotubes and dendrimers The societal impact that nanotechnology has on the environment Chemists and biotechnologists can use Nanotechnology for Environmental Remediation as a comprehensive reference work for thoroughly understanding this new type of technology and why it is so important when considering environmental remediation efforts Due to the practical application of nanotechnologies environmental organizations and agencies can also both utilize the work to explore new and more effective ways of doing things both now and into the future as nanotechnology becomes more common *Membrane Technologies for Heavy Metal Removal from Water* Juhana Jaafar, Asad A. Zaidi, Muhammad Nihal Naseer, 2024-02-12 This

book offers lucid treatment of fundamental concepts related to potential applications and prospects of different membranes for wastewater decontamination by removing heavy metals Divided into four sections it provides an overview of different sources of water contamination their impacts on human health and the environment and compares traditional methods used to nullify these impacts Further it covers different mature membrane technologies such as polymeric membranes poly ceramic membranes carbon based membranes and many more followed by pertinent case studies Features Focuses on the removal of heavy metals using membrane based technologies Discusses pertinent criteria to select suitable membranes Includes feasibility studies and applications of different mature and emerging membranes Describes heavy metals occurrence and transport in an aqueous system with an overview of the adverse effects Reviews challenges and opportunities associated with using different membranes This book is aimed at graduate students and researchers in materials science water engineering and wastewater treatment
