

- III. Special accounting procedures used in the application of the equity method
- A. Reporting a change to the equity method when the ability to significantly influence an investee is achieved through a series of acquisitions.
 - 1. Initial purchase(s) will be accounted for by means of the fair value method (or at cost) until the ability to significantly influence is attained.
 - 2. When the ability to exercise significant influence occurs following a series of stock purchases, the investor applies the equity method prospectively. The total fair value at the date significant influence is attained is compared to the investee's book value to determine future excess fair value amortizations.
 - B. Investee income from other than continuing operations
 - 1. The investor recognizes its share of investee reported other comprehensive income (OCI) through the investment account and the investor's own OCI.
 - 2. Income items such as discontinued operations that are reported separately by the investee should be shown in the same manner by the investor. The materiality of these other investee income elements (as it affects the investor) continues to be a criterion for separate disclosure.
 - C. Investee losses
 - 1. Losses reported by the investee create corresponding losses for the investor.
 - 2. A permanent decline in the fair value of an investee's stock should be recognized immediately by the investor as an impairment loss.
 - 3. Investee losses can possibly reduce the carrying value of the investment account to a zero balance. At that point, the equity method ceases to be applicable and the fair-value method is subsequently used.
 - D. Reporting the sale of an equity investment
 - 1. The investor applies the equity method until the disposal date to establish a proper book value.
 - 2. Following the sale, the equity method continues to be appropriate if enough shares are still held to maintain the investor's ability to significantly influence the investee. If that ability has been lost, the fair-value method is subsequently used.
- IV. Excess investment cost over book value acquired
- A. The price an investor pays for equity securities often differs significantly from the investee's underlying book value primarily because the historical cost based accounting model does not keep track of changes in a firm's fair value.
 - B. Payments made in excess of underlying book value can sometimes be identified with specific investee accounts such as inventory or equipment.
 - C. An extra acquisition price can also be assigned to anticipated benefits that are expected to be derived from the investment. In accounting, these amounts are presumed to reflect an intangible asset referred to as goodwill. Goodwill is calculated as any excess payment that is not attributable to specific identifiable assets and liabilities of the investee. Because goodwill is an indefinite-lived asset, it is not amortized.
