*Analytic Solutions of Functional Equations* Sui Sun Cheng, Wenrong Li, 2008 This book presents a self contained and unified introduction to the properties of analytic functions Based on recent research results it provides many examples of functional equations to show how analytic solutions can be found Unlike in other books analytic functions are treated here as those generated by sequences with positive radii of convergence By developing operational means for handling sequences functional equations can then be transformed into recurrence relations or difference equations in a straightforward manner Their solutions can also be found either by qualitative means or by computation The subsequent formal power series function can then be asserted as a true solution once convergence is established by various convergence tests and majorization techniques Functional equations in this book may also be functional differential equations or iterative equations which are different from the differential equations studied in standard textbooks since composition of known or unknown functions are involved

*Quantum Electrodynamics of Strong Fields* Greiner W. Hold, 2013-06-29 The NATO Advanced Study Institute on Quantum Electrodynamics of Strong Fields was held at Lahnstein on the Rhine from 15-26 June 1981 The school was devoted to the advances theoretical and experimental in the physics of strong fields made during the past decade The topic of the first week was almost exclusively quantum electrodynamics with discussions of symmetry breaking in the ground state of the physics of heavy ion collisions and of precision tests of perturbative quantum electrodynamics This was followed in the second week by the presentation of a broad range of other areas where strong fields occur reaching from nuclear physics over quantum chromodynamics to gravitation theory and astrophysics We were

fortunate to be able to call on a body of lecturers who not only have made considerable personal contributions to these advances but who are also noted for their lecturing skills Their dedication for their subject was readily transmitted to the students resulting in a very successful school This enthusiasm is also reflected in their contributions to these Proceedings which as I believe will in time become a standard source of reference for future work on the physics of strong fields and will help to spread the benefits of the school to a larger audience than those who were able to attend I regret that the Soviet colleagues Ya B Zeldovich and V S Popov were unable to participate

**Handbook of Differential Equations: Ordinary Differential Equations** A. Canada, P. Drabek, A. Fonda, 2006-08-21 This handbook is the third volume in a series of volumes devoted to self contained and up to date surveys in the theory of ordinary differential equations written by leading researchers in the area All contributors have made an additional effort to achieve readability for mathematicians and scientists from other related fields so that the chapters have been made accessible to a wide audience These ideas faithfully reflect the spirit of this multi volume and hopefully it becomes a very useful tool for research learning and teaching This volume consists of seven chapters covering a variety of problems in ordinary differential equations Both pure mathematical research and real world applications are reflected by the contributions to this volume Covers a variety of problems in ordinary differential equations Pure mathematical and real world applications Written for mathematicians and scientists of many related fields

Rein Vihalemm, 2012-12-06 The development of geography also forms an interesting chapter in the history of the University of Tartu and in that of Estonian science in general On the one hand geography is a natural science in the broader sense of the word on the other hand it is a study of human activity This status of geography makes it particularly sensitive to the cultural and political circumstances under which scholarship and science have developed in Estonia The article by Professor of Human Geography Ott Kurs born 1939 and historian of science PhD in geography Erki Tamrniksaar born 1969 In Political Draughts Between Science and the Humanities Geography at the University of Tartu Between the 17th and 20th Centuries is devoted to this topic Among other things the article states that regular instruction in geography started at the University of Tartu in 1826 when the second chair of geography in Europe was established here Although the present book does not contain any studies on philosophy at Tartu University in the 19th century I would still like to mention two names In the early 19th century Kant's philosophy was dominant at Tartu University One of Kant's pupils Gottlob Benjamin Jasche 1762-1839 who had worked under him as a Privatdozent in Königsberg served as a professor here from 1802-1839 In the history of philosophy he is primarily known as the publisher of Kant's Logic
