Introduction to Statistical Inference Jack C. Kiefer,2012-12-06 This book is based upon lecture notes developed by

Jack Kiefer for a course in statistical inference he taught at Cornell University The notes were distributed to the class in lieu of a textbook and the problems were used for homework assignments Relying only on modest prerequisites of probability theory and calculus Kiefer's approach to a first course in statistics is to present the central ideas of the modern mathematical theory with a minimum of fuss and formality He is able to do this by using a rich mixture of examples pictures and mathematical derivations to complement a clear and logical discussion of the important ideas in plain English The straightforwardness of Kiefer's presentation is remarkable in view of the sophistication and depth of his examination of the major theme How should an intelligent person formulate a statistical problem and choose a statistical procedure to apply to it Kiefer's view in the same spirit as Neyman and Wald is that one should try to assess the consequences of a statistical choice in some quantitative frequentist formulation and ought to choose a course of action that is verifiably optimal or nearly so without regard to the perceived attractiveness of certain dogmas and methods
