NACE Corrosion Engineer's Reference Book National Association of Corrosion Engineers, 1980 **Shreir's Corrosion**, 2009-02-27 This four volume reference work builds upon the success of past editions of Elsevier's Corrosion title by Shreir, Jarman and Burstein covering the range of innovations and applications that have emerged in the years since its publication. Developed in partnership with experts from the Corrosion and Protection Centre at the University of Manchester, Shreir's Corrosion meets the research and productivity needs of engineers, consultants and researchers alike. Incorporates coverage of all aspects of the corrosion phenomenon from the science behind corrosion of metallic and non-metallic materials in liquids and gases to the management of corrosion in specific industries and applications. Features cutting edge topics such as medical applications, metal matrix composites and corrosion modeling. Covers the benefits and limitations of techniques from scanning probes to electrochemical noise and impedance spectroscopy.

DeGarmo's Materials and Processes in Manufacturing, Global Edition J. T. Black, Ronald A. Kohser, 2017-12-04 Newly revised DeGarmo's Materials and Processes in Manufacturing has been the market leading text on manufacturing and manufacturing processes courses for over fifty years. Authors J. T. Black and Ron Kohser have continued this book's long and distinguished tradition of exceedingly clear presentation and highly practical approach to materials and processes, presenting mathematical models and analytical equations only when they enhance the basic understanding of the material. Updated to reflect all current practices, standards and materials, this edition has new coverage of additive manufacturing, lean engineering and processes related to ceramics, polymers and plastics.

Metallurgy and Corrosion Control in Oil and Gas Production Robert Heidersbach, 2010-12-01 This book is intended for engineers and related professionals in the oil and gas production industries. It is intended for use by personnel with limited backgrounds in chemistry, metallurgy and corrosion and will give them a general understanding of how and why corrosion occurs and the practical approaches to how the effects of corrosion can be mitigated. It is also an asset to the entry level corrosion control professional who may have a theoretical background in metallurgy, chemistry or a related field but who needs to understand the practical limitations of large scale industrial operations associated with oil and gas production. While it may be used by technicians and others with limited formal technical training, it will be written on a level intended for use by engineers having had some exposure to college level chemistry and some familiarity with materials and engineering design.
