The Return of Bipolarity in World Politics Øystein Tunsjø, 2018-02-27

Since the collapse of the Soviet Union the international system has been unipolar centered on the United States But the rise of China foreshadows a change in the distribution of power ystein Tunsj shows that the international system is moving toward a U S China standoff bringing us back to bipolarity a system in which no third power can challenge the top two The Return of Bipolarity in World Politics surveys the new era of superpowers to argue that the combined effects of the narrowing power gap between China and the United States and the widening power gap between China and any third ranking power portend a new bipolar system that will differ in crucial ways from that of the last century Tunsj expands Kenneth N Waltz's structural realist theory to examine the new bipolarity within the context of geopolitics which he calls geostructural realism He considers how a new bipolar system will affect balancing and stability in U S China relations predicting that the new bipolarity will not be as prone to arms races as the previous era's that the risk of limited war

between the two superpowers is likely to be higher in the coming bipolarity especially since the two powers are primarily rivals at sea rather than on land and that the superpowers are likely to be preoccupied with rivalry and conflict in East Asia instead of globally. Tunsj presents a major challenge to how international relations understands superpowers in the twenty first century

Handbook of Biology and Politics Steven A. Peterson, Albert Somit, 2017-05-26 The study of biology and politics or biopolitics has gained considerable currency in recent years as articles on the subject have appeared in mainstream journals and books on the subject have been well received. The literature has increased greatly since the 1960s and 1970s when this specialization first made an appearance. This volume assesses the contributions of biology to political science. Chapters focus on general biological approaches to politics, biopolitical contributions to mainstream areas within political science, and linkages between biology and public policy. The volume provides readers with a comprehensive introduction to the subject.

Understanding New Security Threats Michel Gueldry, Gigi Gokcek, Lui Hebron, 2019-02-21 This textbook examines non traditional forms of security and expands the notion of security to include non state actors and non human actors. Proposing an expansive view of non traditional forms of security that go beyond traditionally recognized issues of threats to state and national territory, this new textbook rests on the following premises: traditional state centered threats such as nuclear proliferation and espionage remain a concern; old and new threats combine and create interlocking puzzles; a feature of wicked problems and wicked messes because of the global erosion of borders; new developments of unconventional insecurity interact in ways that frustrate traditional conceptual definitions, conceptual maps, and national policies; unconventional security challenges which have traditionally been seen as low politics or soft issues are now being recognized as hard security challenges. In the twenty first century many of the so called new threats detailed here are in fact very old: diseases, gender violence, food insecurity, under development, and crime are all traditional security threats but deeply modified today by globalization. The chapters offer local and global examples and engage with various theoretical approaches to help readers see the bigger picture. Solutions are also suggested to these problems. Each chapter contains discussion questions to help readers understand the key points and facilitate class discussion. This book will be of great interest to students of international security studies, human security, global politics, and international relations.
