Predictive Analytics with Matlab. Machine Learning Techniques J. Smith,2017-05 Predictive analytics is an area of statistics that deals with extracting information from data and using it to predict trends and behavior patterns Often the unknown event of interest is in the future but predictive analytics can be applied to any type of unknown whether it be in the past present or future For example identifying suspects after a crime has been committed or credit card fraud as it occurs The core of predictive analytics relies on capturing relationships between explanatory variables and the predicted variables from past occurrences and exploiting them to predict the unknown outcome It is important to note however that the accuracy and usability of results will depend greatly on the level of data analysis and the quality of assumptions This books develops the important predictive models like Support Vector Machine Nearest Neighbors KNN Classifiers Support Vector Machine Regression Gaussian Process Regression Classification and Regression Trees Regression Models with Neural Networks Neural Networks Time Series Prediction and Classification with Naive Bayes
