# Disentangled Representation Learning GAN for Pose-Invariant Face Recognition[1]

Figure 1: With one or multiple face images as the input, DR-GAN can produce an identity representation that is both discriminative and generative, i.e., the representation demonstrates superior PIFR performance, and can synthesize identity-preserving faces at target poses specified by the pose code.

功能:
提出一个框架同时用于
pose-invariant representation (用于识别)
+
face frontalization (生成正立的人脸)

实现:
将人脸解构成Identity Representation+Pose Code+Noise

to improve downstream classification tasks In this study we build upon this existing framework by 1 investigating disentangled representation learning in the multidimensional task of emotion detection 2 testing the robustness of this methodology over varying datasets and 3 exploring the interpretability of the produced latent representations We discover that closely following existing disentangled representation learning methods for sentiment analysis in a multi class setting performance decreases significantly and we are unable to effectively distinguish content and style in our learned latent representations Further work is necessary to determine the effectiveness of style disentanglement for text in multi class settings using adversarial training *Disentangled Representation with Dual-stage Feature Learning for Face Anti-spoofing* Yu yun Wang,2021 **Real-time Feedback Via Pose Estimation and Representation Learning for a Tai-Chi Chuan Assisted Learning System** 陈彦任,2024 **Disentangled Representations in Neural Models** William F. Whitney (M. Eng),2016 Representation learning is the foundation for the recent success of neural network models However the distributed representations generated by neural networks are far from ideal Due to their highly entangled nature they are difficult to reuse and interpret and they do a poor job of capturing the sparsity which is present in real world transformations In this paper I describe methods for learning disentangled representations in the two domains of graphics and computation These methods allow neural methods to learn representations which are easy to interpret and reuse yet they incur little or no penalty to performance In the Graphics section I demonstrate the ability of these methods to infer the generating parameters of images and rerender those images under novel conditions In the Computation section I describe a model which is able to factorize a multitask learning problem into subtasks and which experiences no catastrophic forgetting Together these techniques provide the tools to design a wide range of models that learn disentangled representations and better model the factors of variation in the real world **Generative Adversarial Networks Projects** Kailash Ahirwar,2018-10-31 Explore various Generative Adversarial Network architectures using the Python ecosystem Key Features Use different datasets to build advanced projects in the Generative Adversarial Network domain Implement projects ranging from generating 3D shapes to a face aging application Explore the power of GANs to contribute in open source research and projects Book Description Generative Adversarial Networks GANs have the potential to build next generation models as they can mimic any distribution of data Major research and development work is being undertaken in this field since it is one of the rapidly growing areas of machine learning This book will test unsupervised techniques for training neural networks as you build seven end to end projects in the GAN domain Generative Adversarial Network Projects begins by covering the concepts tools and libraries that you will use to build efficient projects You will also use a variety of datasets for the different projects covered in the book The level of complexity of the operations required increases with every chapter helping you get to grips with using GANs You will cover popular approaches such as 3D GAN DCGAN StackGAN and CycleGAN and you ll gain an understanding of the architecture and functioning of generative models through their practical implementation By the end of

this book you will be ready to build train and optimize your own end to end GAN models at work or in your own projects What you will learn Train a network on the 3D ShapeNet dataset to generate realistic shapes Generate anime characters using the Keras implementation of DCGAN Implement an SRGAN network to generate high resolution images Train Age cGAN on Wiki Cropped images to improve face verification Use Conditional GANs for image to image translation Understand the generator and discriminator implementations of StackGAN in Keras Who this book is for If you re a data scientist machine learning developer deep learning practitioner or AI enthusiast looking for a project guide to test your knowledge and expertise in building real world GANs models this book is for you *Disentanglement, Compositionality, Specification* Tobias Hinz,2021
