Principles Of Neurocomputing For Science Engineering:

Principles of Neurocomputing for Science and Engineering Frederic M. Ham, Ivica Kostanic, 2001 This exciting new text covers artificial neural networks but more specifically neurocomputing Neurocomputing is concerned with processing information which involves a learning process within an artificial neural network architecture This neural architecture responds to inputs according to a defined learning rule and then the trained network can be used to perform certain tasks depending on the application Neurocomputing can play an important role in solving certain problems such as pattern recognition optimization event classification control and identification of nonlinear systems and statistical analysis Principles of Neurocomputing for Science and Engineering unlike other neural networks texts is written specifically for scientists and engineers who want to apply neural networks to solve complex problems For each neurocomputing concept a solid mathematical foundation is presented along with illustrative examples to accompany that particular architecture and associated training algorithm The book is primarily intended for graduate level neural networks courses but in some instances may be used at the undergraduate level The book includes many detailed examples and an extensive set of end of chapter problems

New Analysis and Modeling Directions in Social Interaction Science Sophie C. F. Hendrikse,Jan Treur,Sander L. Koole,2026-01-01 There is much scientific literature on multimodal social interaction between human and or virtual agents and related multimodal synchrony analysis and behavioural adaptivity within the interaction such as affiliation and bonding However due to its strongly cyclical character complexity and adaptivity mathematical formalisation and computational

simulation of it is a nontrivial topic Moreover the subjective agent oriented perspective on synchrony analysis has not yet received much attention in the literature This book provides from an agent oriented perspective an overview of recent work on mathematical formalisation and computational simulation of multimodal interaction subjective multimodal synchrony analysis and related behavioural adaptivity underlying for example affiliation liking and bonding It does so by exploiting the possibilities of multi time scale multi adaptive multi level self modeling network models for agents to analyse and model these dynamic and adaptive processes formally In this way it contributes to the development of a solid basis for social interaction science
