Adaptive Modelling, Estimation and Fusion from Data Chris Harris, Xia Hong, Qiang Gan, 2011-03-30 **Adaptive Modelling, Estimation and Fusion from Data** Chris Harris, Xia Hong, Qiang Gan, 2012-10-05 In a world of almost permanent and rapidly increasing electronic data availability techniques of filtering compressing and interpreting this data to transform it into valuable and easily comprehensible information is of utmost importance One key topic in this area is the capability to deduce future system behavior from a given data input This book brings together for the first time the complete theory of data based neurofuzzy modelling and the linguistic attributes of fuzzy logic in a single cohesive mathematical framework After introducing the basic theory of data based modelling new concepts including extended additive and multiplicative submodels are developed and their extensions to state estimation and data fusion are derived All these algorithms are illustrated with benchmark and real life examples to demonstrate their efficiency Chris Harris and his group have carried out pioneering work which has tied together the fields of neural networks and linguistic rule based algorithms This book is aimed at researchers and scientists in time series modeling empirical data modeling knowledge discovery data mining and data fusion *Interdisciplinary Mechatronics* M. 2 1 Text Summarization Text summarization is the process of distilling the most important information from a source or sources to produce an abridged version for a particular user or users and task or tasks

3 Basic and classical articles in text summarization appear in Advances in automatic text summarization

3 A literature survey on information extraction and text summarization is given by Zechner

7 In general the process of automatic text summarization is divided into three stages

- 1 analysis of the given text
- 2 summarization of the text
- 3 presentation of the summary in a suitable output form

Titles abstracts and keywords are the most common summaries in Academic papers Usually the title the abstract and the keywords are the first second and third parts of an Academic paper respectively The title usually describes the main issue discussed in the study and the abstract presents the reader a short description of the background the study and its results A keyword is either a single word unigram e.g. learning or a collocation which means a group of two or more words representing an important concept e.g. machine learning natural language processing

Retrieving collocations from text was examined by Smadja

5 and automatic extraction of collocations was examined by Kita et al

Handbook of Dynamic Data Driven Applications Systems Frederica Darema,Erik P. Blasch,Sai Ravela,Alex J. Aved,2023-09-14 This Second Volume in the series Handbook of Dynamic Data Driven Applications Systems DDDAS expands the scope of the methods and the application areas presented in the first Volume and aims to provide additional and extended content of the increasing set of science and engineering advances for new capabilities enabled through DDDAS The methods and examples of breakthroughs presented in the book series capture the DDDAS paradigm and its scientific and technological impact and benefits The DDDAS paradigm and the ensuing DDDAS based frameworks for systems analysis and design have been shown to engender new and advanced capabilities for understanding analysis and management of engineered natural and societal systems applications systems and for the commensurate wide set of scientific and engineering fields and applications as well as foundational areas The DDDAS book series aims to be a reference source of many of the important research and development efforts conducted under the rubric of DDDAS and to also inspire the broader communities of researchers and developers about the potential in

their respective areas of interest of the application and the exploitation of the DDDAS paradigm and the ensuing frameworks through the examples and case studies presented either within their own field or other fields of study As in the first volume the chapters in this book reflect research work conducted over the years starting in the 1990 s to the present Here the theory and application content are considered for Foundational Methods Materials Systems Structural Systems Energy Systems Environmental Systems Domain Assessment address challenges that ML alone does not and also show how ML in combination with DDDAS based methods can deliver the advanced capabilities sought likewise infusion of DDDAS like approaches in NN methods strengthens such methods Moreover the DDDAS based Digital Twin or Dynamic Digital Twin goes beyond the traditional DT notion where the model and the physical system are viewed side by side in a static way to a paradigm where the model dynamically interacts with the physical system through its instrumentation per the DDDAS feed back control loop between model and instrumentation
