professionals using mathematical modelling for research and training purposes **Mathematical Modelling A Graduate Textbook** covers a broad range of analytical and computational aspects of mathematical modelling **Mathematical Modeling** Antonio Palacios,2022-09-19 This book provides qualitative and quantitative methods to analyze and better understand phenomena that change in space and time An innovative approach is to incorporate ideas and methods from dynamical systems and equivariant bifurcation theory to model analyze and predict the behavior of mathematical models In addition real life data is incorporated in the derivation of certain models For instance the model for a fluxgate magnetometer includes experiments in support of the model The book is intended for interdisciplinary scientists in STEM fields who might be interested in learning the skills to derive a mathematical representation for explaining the evolution of a real system Overall the book could be adapted in undergraduate and postgraduate level courses with students from various STEM fields including mathematics physics engineering and biology **Rotordynamics of Automotive Turbochargers** Hung

Nguyen-Schäfer,2012-03-06 This book deals with rotordynamics of automotive turbochargers while encompassing the analysis of the dynamics of rotating machines at very high rotor speeds of 300 000 rpm and above This interdisciplinary field involves 1 thermodynamics and turbo matching knowledge to compute working conditions of turbochargers 2 fluid and bearing dynamics to calculate various operating thrust loads and to design the rotating floating ring bearings two oil film bearings and 3 tribology to improve the rotor stability and to reduce the bearing friction Mathematical background in modeling and simulation methods is necessary however the prerequisites have been kept to a minimum The book addresses both practitioners working in the field of rotordynamics of automotive turbochargers and graduate students in mechanical engineering **Biology in Time and Space: A Partial Differential Equation Modeling Approach** James P.

Keener,2021-06-02 How do biological objects communicate make structures make measurements and decisions search for food i e do all the things necessary for survival Designed for an advanced undergraduate audience this book uses mathematics to begin to tell that story It builds on a background in multivariable calculus ordinary differential equations and basic stochastic processes and uses partial differential equations as the framework within which to explore these questions

IUTAM Symposium on Nonlinear Dynamics for Advanced Technologies and Engineering Design Marian Wiercigroch,Giuseppe Rega,2013-01-11 Nonlinear dynamics has been enjoying a vast development for nearly four decades resulting in a range of well established theory with the potential to significantly enhance performance effectiveness reliability and safety of physical systems as well as offering novel technologies and designs By critically appraising the state of the art it is now time to develop design criteria and technology for new generation products processes operating on principles of nonlinear interaction and in the nonlinear regime leading to more effective sensitive accurate and durable methods than what is currently available This new approach is expected to radically influence the design control and exploitation paradigms in a magnitude of contexts With a strong emphasis on experimentally calibrated and validated models

contributions by top level international experts will foster future directions for the development of engineering technologies and design using robust nonlinear dynamics modelling and analysis

Hopf Bifurcation Analysis Jorge L. Moiola, Guanrong Chen,1996

This book is devoted to the frequency domain approach for both regular and degenerate Hopf bifurcation analyses

Besides showing that the time and frequency domain approaches are in fact equivalent the fact that many significant results and computational formulas

obtained in the studies of regular and degenerate Hopf bifurcations from the time domain approach can be translated and reformulated into the corresponding frequency domain setting and be reconfirmed and rediscovered by using the frequency domain methods is also explained The description of how the frequency domain approach can be used to obtain several types of standard bifurcation conditions for general nonlinear dynamical systems is given as well as is demonstrated a very rich pictorial gallery of local bifurcation diagrams for nonlinear systems under simultaneous variations of several system parameters In conjunction with this graphical analysis of local bifurcation diagrams the defining and nondegeneracy conditions for several degenerate Hopf bifurcations is presented With a great deal of algebraic computation some higher order harmonic balance approximation formulas are derived for analyzing the dynamical behavior in small neighborhoods of certain types of degenerate Hopf bifurcations that involve multiple limit cycles and multiple limit points of periodic solutions In addition applications in chemical mechanical and electrical engineering as well as in biology are discussed This book is designed and written in a style of research monographs rather than classroom textbooks so that the most recent contributions to the field can be included with references
