The study of the geometry of structures that arise in a variety of specific natural systems such as chemical physical biological  
and geological revealed the existence of a wide range of types of polytopes of the highest dimension that were unknown in  
classical geometry At the same time new properties of polytopes were discovered as well as the geometric patterns to which  
they obey There is a need to classify these types of polytopes of the highest dimension by listing their properties and  
formulating the laws to which they obey *The Classes of Higher Dimensional Polytopes in Chemical Physical and Biological*  
*Systems* explains the meaning of higher dimensions and systematically generalizes the results of geometric research in  
various fields of knowledge This book is useful both for the fundamental development of geometry and for the development of  
branches of science related to human activities It builds upon previous books published by the author on this topic Covering
