About Sustaining Supply Technology for Manned Spacecraft Christian Zschoch,2020-02-19 At the present time space travel is characterized by separately developed technologies of the space traveling nations Depending on fixed financial budgets and expensive technology companies the developed spaceships are strongly designed just for a specific mission profile in order to reduce costs and risks as far as possible Because of their less sustainable supply concept these spacecraft allow only a limited mission duration and require regular supply deliveries in addition On the other hand side mission periods continue to lengthen with the planned exploration of Mars asteroids or other objects that are even more distant These missions will require high sustainable supply concepts in order to enable autonomous and long term life support of human mission participants The now existing solutions do not yet meet these requirements so the current approach of spacecraft design had to undergo a conceptual review The research made in the context of this work led to the design of a new generation of spacecraft which supports with its optimized hull construction such extended long term missions in terms of durability variability and life support All its embedded biological and chemical processes have on the one hand the primary aim to enable humans a long stay in space and on the other hand to be independent of an external mission supply The performed research activities also included the necessary mechanical and energetical functions for which an extreme lifetime extension of up to 60 years was aimed

Tewari,2018-12-20 This book consolidates decades of knowledge on space flight navigation theory which has thus far been spread across various research articles By gathering this research into a single text it will be more accessible to students curious about the study of space flight navigation Books on optimal control theory and orbital mechanics have not adequately explored the field of space flight navigation theory until this point The opening chapters introduce essential concepts within optimal control theory such as the optimization of static systems special boundary conditions and dynamic equality constraints An analytical approach is focused on throughout as opposed to computational The result is a book that emphasizes simplicity and practicability which makes it accessible and engaging This holds true in later chapters that involve orbital mechanics two body maneuvers bounded inputs and flight in non spherical gravity fields The intended audience is primarily upper undergraduate students graduate students and researchers of aerospace mechanical and or electrical engineering It will be especially valuable to those with interests in spacecraft dynamics and control Readers should be familiar with basic dynamics and modern control theory Additionally a knowledge of linear algebra variational methods and ordinary differential equations is recommended

Atmospheric and Space Flight Dynamics Ashish Tewari,2007-11-15 Modern aerospace vehicles such as the space shuttle other launch vehicles and long range ballistic missiles do not discriminate between atmospheric and space flight Most texts on flight dynamics however make this artificial distinction and therefore do not simultaneously cover aircraft and spacecraft Bridging this gap in the literature Atmospheric and Space Flight Dynamics is a unified presentation demonstrating that the two disciplines have actually evolved from the same set of physical principles Key features include an introduction to a broad range of modern topics in an accessible yet mathematically rigorous presentation many numerical examples and simulations utilizing MATLAB and Simulink software used as an instructional hands on tool moving away from the cookbook approach found in other works and numerous illustrations and end of chapter exercises Primarily useful as a textbook for advanced undergraduate and beginning graduate level students the work is also an excellent reference or self study guide for researchers and practitioners in aerospace engineering aviation mechanical engineering dynamics astrodynamics aeronautics and astronautics
