Annual Report, 2014 *Advances and Trends in Development of Plant Factories* Alejandro Isabel Luna-Maldonado, Juan Antonio Vidales-Contreras, Humberto Rodríguez-Fuentes, 2017-03-22 The plant factory is a facility that aids the steady production of high quality vegetables all year round by artificially controlling

the cultivation environment e.g. light, temperature, humidity, carbon dioxide concentration and culture solution allowing growers to plan production. By controlling the internal environment, plant factories can produce vegetables about two to four times faster than by typical outdoor cultivation. In addition, as multiple cultivation shelves or a multi-shelf system are used, the mass production of vegetables in a small space is facilitated. This research topic presents some new trends on intelligent measuring systems, environment controlled and optimization, flavonoids, phenylpropanoids, transcriptomes and bacteria.
