Design of Racing and High-Performance Engines 2004-2013 Douglas Fehan, 2013-02-12 This compendium is an update to two best selling editions published by SAE International in 1995 and 2003 Editor Doug Fehan has assembled a collection of technical papers from the SAE archive that will inspire readers to use race engine development as an important tool in the future of transportation He focuses on several topics that are important to future race engine design electrification materials and processes and improved technology Today s electric hybrid vehicles and kinetic energy recovery systems embody what inventors envisioned in the early 1900s First employed in trams and trains of that era the technology was almost forgotten until racers resurrected their version in 2009 F 1 racing The automotive industry has long admired the aircraft industry s use of lightweight metals advanced finishing processes and composites The use of these materials and processes has helped reduce overall mass and in turn improved speed performance and reliability of race engines Their initial high cost was a limiting factor for integrating them into mass produced vehicles With racing leading the way those limitations were overcome and vehicles today feature some amazing adaptations of those processes and materials Engine power efficiency durability reliability and more recently emissions have always been of primary importance to the automotive world The expanding use of electrification biofuels CNG high pressure fuel delivery systems combustion air management turbocharging supercharging and low viscosity lubricants have been the focus of race engine development and are now turning up in dealer showrooms The papers in this publication were selected for two reasons they demonstrate the leadership that racing plays in the future of automotive engineering and design as it relates to engines and they will be interesting to everyone who may be in racing and to those who may want to be in racing **Competition Engine Building** John Baechtel, 2012 The needs of a true competition engine are quite different than those of the engine under the hood of a typical commuter car From the basic design needs to the base component materials to the sizes of the flow related hardware to the precision of the machining to the capabilities of each pertinent system very few similarities exist Many books exist showcasing how to make street based engines more powerful and or durable This book is different in that it focuses purely on the needs of high rpm high durability high powered racing engines It begins by looking at the raw design needs and then shares how these needs are met at the

various phases of an engine's development assembly testing and tuning This book features reviews of many popular modern tools techniques products and testing data collecting machinery Showing the proper way to use such tools how to accurately collect data and how to use the data effectively when designing an engine is critical information not readily available elsewhere The special needs of a competition engine aren't commonly discussed and the many secrets competition engine builders hold closely are openly shared on the pages here Authored by veteran author John Baechtel Competition Engine Building stands alone as a premier guide for enthusiasts and students of the racing engine It also serves as a reference guide for experienced professionals anxious to learn the latest techniques or see how the newest tools are used Baechtel is more than just an author as he holds or has held several World Records at Bonneville Additionally his engines have won countless races in many disciplines including road racing and drag racing
