Infrastructure for Agents, Multi-Agent Systems, and Scalable Multi-Agent Systems Tom Wagner,Omer F. Rana,2003-08-06 Building research grade multi agent systems usually involves a broad variety of software infrastructure ingredients like planning scheduling coordination communication transport simulation and module integration technologies and as such constitutes a great challenge to the individual researcher active in the area The book presents a collection of papers on approaches that will help make deployed and large scale multi agent systems a reality The first part focuses on available infrastructure and requirements for constructing research grade agents and multi agent systems The second part deals with support in infrastructure and software development methods for multi agent systems that can directly support coordination and management of large multi agent communities performance analysis and scalability techniques are needed to promote deployment of multi agent systems to professionals in software engineering and information technology

From Theory to Practice in Multi-Agent Systems Barbara Dunin-Keplicz,Edward Nawarecki,2003-08-03 This volume contains the papers selected for presentation at CEEMAS 2001 The workshop was the fourth in a series of international conferences devoted to autonomous agents and multi agent systems organized in Central Eastern Europe Its predecessors were CEEMAS 99 and DAIMAS 97 which took place in St Petersburg Russia as well as DIMAS 95 which took place in Cracow Poland Organizers of all these events made efforts to make them wide open to participants from all over the world This would have been impossible without some help from friendly centers in the Czech Republic England France Japan and The Netherlands DIMAS 95 featured papers from 15 countries while CEEMAS 99 from 18 countries A total of 61 papers were submitted to CEEMAS 2001 from 17 countries Out of these papers 31 were selected for regular presentation while 14 were qualified as posters The motto of the meeting was Diversity is the core of multi agent systems This variety of subjects was clearly visible in the CEEMAS 2001 program addressing the following major areas of multi agent systems Organizations and social aspects of

1 Multiagent Engineering A New Software Construction Paradigm Multiagent systems have a long academic tradition They have their roots in distributed problem solving in Artificial Intelligence AI from where they emerged in the mid eighties as a distinctive discipline Research in multiagent systems owes much to the work of Rosenschein on rationality and autonomy of intelligent agents the European MAAMAW workshop series and last but not least the famous readings of Bond Gasser 1988 and Jacques Ferber s book on multiagent systems 1991 It gained further by a public discussion via the Distributed AI mailing list in summer 1991 when the pioneers of the field compared in much detail the concepts of distributed problem solvers to multiagent systems Within only five years a new exciting field of research had been established Now 15 years later the field has matured to a degree that allows the sults of academic research to be passed on to practical use and commercial exploitation This potential coincides with a need for much larger flexib ity of our IT infrastructure in light of its highly distributed character and extreme complexity but also the global character of the business processes and the large number of business partners due to outsourcing and specia zation Many experts claim that multiagent systems are the right software technology for the needed IT infrastructure at the right time The appeal has much to do with the broad perspectives of multiagent systems research Agent-Oriented Software Engineering IV Paolo Giorgini, Jörg Müller, James Odell, 2003-12-22

The explosive growth of application areas such as electronic commerce ent prise resource planning and mobile computing has profoundly and irreversibly changed our views on software systems Nowadays software is to be based on open architectures that continuously change and evolve to accommodate new components and meet new requirements Software must also operate on di rent platforms without recompilation and with minimal assumptions about its operating environment and its users Furthermore software must be robust and autonomous capable of serving a naive user with a minimum of overhead and interference Agent concepts hold great promise for responding to the new realities of so ware systems They o er higher level abstractions and mechanisms that address issues such as knowledge representation and reasoning communication coor nation cooperation among heterogeneous and autonomous parties perception commitments goals beliefs and intentions all of which need conceptual mo ling On the one hand the concrete implementation of these concepts can lead to advanced functionalities e g in inference based query answering transaction control adaptive work ows brokering and integration of disparate information sources and automated communication processes On the other hand their rich representational capabilities allow more faithful and exible treatments of c plex organizational processes leading to more e ective requirements analysis and architectural detailed design **Coordination,**
