**Trading Time** Shaun Downey,2007 *Trading Time* a double meaning referring to the allocation of the  
time to trade and also understanding the critical information regarding where you are in time when a trade is placed This  
facet of time has many characteristics The timeframe of the chart that was used How critical is the immediate price action  
directly after the trade is placed At what point in time is the trade within the trend or are we at the end of the trend How  
strong is the trend based on the time it has existed What is the risk and expectation in relationship to time What is the  
dominant and correct time frame to be trading Obtaining a true measure of expectation in any one period of time is critical to  
improving the chances of success Fear and greed can be removed from the equation providing a framework for the good  
trader and an understanding of risk and expectation to the new one This book looks at the characteristics of time in detail  
using propriety studies that analyse time through referencing each part of the day to its previous behaviour at similar periods  
previously This creates a true measure of momentum and allows for fixed reference points that understand normal and  
unusual behaviour in multiple time frames at the same time This means the trader no longer has to wait for the current bar  
to finish before he can implement trades as many of the studies reference the opening price and not the close unlike many  
established momentum based concepts New studies such as Oasis Volatility Time Bands Range Deviation Pivots Time
