Wooldridge,1995-01-26 This volume coherently present 24 thoroughly revised full papers accepted for the ECAI 94 Workshop on Agent Theories Architectures and Languages There is currently considerable interest from both the AI and the mainstream CS communities in conceptualizing and building complex computer systems as collections of intelligent agents This book is devoted to theoretical and practical aspects of architectural and language related design and implementation issues of software agents Particularly interesting is the comprehensive survey by the volume editors which outlines the key issues and indicates via a comprehensive bibliography topics for further reading In addition a glossary of key terms in this emerging field and a comprehensive subject index is included *Distributed Artificial Intelligence Meets Machine Learning Learning in Multi-Agent Environments* Gerhard Weiß,1997-04-29 This state of the art report documents current and ongoing developments in the area of learning in DAI systems It is indispensable reading for anybody active in the area and will serve as a valuable source of information and inspiration for AI and ML professionals wishing to learn about this new interdisciplinary field or to prepare themselves for doing relevant research

*Software Engineering for Multi-agent Systems ...* ,2006 *Intelligent Agents for Telecommunications Applications* Sahin Albayrak,1998 Intelligent agent and distributed AI DAI approaches attach specific conditions to cooperative exchanges between intelligent systems that go far beyond simple functional interoperability Ideally systems that pursue local or global goals coordinate their actions share knowledge and resolve conflicts during their interactions within groups of similar or dissimilar agents can be viewed as cooperative coarse grained systems The infrastructure of telecommunications is a world in transition There are a number of trends that contribute to this convergence of traditional telephony and data network worlds blurring of boundaries between public and private networks complementary evolution of wireline wireless and cable network infrastructures the emergence of integrated broadband multimedia networks and of course the information

superhighway Up to now despite the effort that has gone into this area the field of intelligent agents research has not yet led to many fielded systems Telecommunications applications pose strong requirements to agents such as reliability real time performance openness security management and other integrated management and mobility In order to fulfil their promise intelligent agents need to be fully dependable and typically require an integrated set of capabilities This is the challenge that exists for intelligent agents technology in this application domain *Agent-Based Software Development* ,2004
