**Biological and Biomedical Infrared Spectroscopy** Andreas Barth, Parvez I. Haris, 2009 Although infrared spectroscopy has been applied with success to the study of important biological and biomedical processes for many years key advances in this vibrant technique have led to its increasing use ranging from characterization of individual macromolecules DNA RNA lipids proteins to human tissues cells and their components Infrared spectroscopy thus has a significant role to play in the analysis of the vast number of genes and proteins being identified by the various genomic sequencing projects Whilst this book gives an overview of the field it highlights more recent developments such as the use of bright synchrotron radiation for recording infrared spectra the development of two dimensional infrared spectroscopy and the ability to record infrared spectra at ultra fast speeds The main focus is on the mid infrared region since the great majority of studies are carried out in this region but there is increasing use of the near infrared for biomedical applications and a chapter is devoted to this part of the spectrum

Biological and Biomedical Infrared Spectroscopy is intended for use both by research scientists already active in the use of biological infrared spectroscopy and for those coming new to the technique Graduate students will also find it useful as an introduction to the technique [Intro.To Bio Informatics](#) P Lesk,2005-03 Introduces the student to the power of bioinformatics as a set of scientific tools This book explains how to access the data archives of genomes and proteins and the kind of questions these data and tools can answer how to make inferences from the data archives to make connections among them and to derive useful and interesting predictions
