Information Theory And Coding Solved Problems Predrag:

Information Theory and Coding - Solved Problems Predrag Ivaniš, Dušan Drajić, 2016-11-29 This book offers a comprehensive overview of information theory and error control coding using a different approach than in existing literature. The chapters are organized according to the Shannon system model where one block affects the others. A relatively brief theoretical introduction is provided at the beginning of every chapter including a few additional examples and explanations but without any proofs. And a short overview of some aspects of abstract algebra is given at the end of the corresponding chapters. The characteristic complex examples with a lot of illustrations and tables are chosen to provide detailed insights into the nature of the problem. Some limiting cases are presented to illustrate the connections with the theoretical bounds. The numerical values are carefully selected to provide in-depth explanations of the described algorithms. Although the examples in the different chapters can be considered separately they are mutually connected and the conclusions for one considered problem relate to the others in the book. **Mathematical Reviews**, 2005 Proceedings, ... Information Theory, Coding and Cryptography Arijit Saha, Nilotpal Manna, Surajit Mandal, 2013 Information Theory Coding Cryptography has been designed as a comprehensive book for the students of engineering discussing Source Encoding Error Control Codes Cryptography. The book contains the recent developments of coded modulation trellises for codes turbo coding for reliable data and interleaving. The text balances the mathematical rigor with an exhaustive amount of solved/unsolved questions along with a database of MCQs. *IETE Technical Review*, 1995 **Dissertation Abstracts International**, 2008 *Proceedings of the ... Information and Coding Theory Gareth A. Jones, J. Mary Jones, 2012-12-06 As this Preface is being written the twentieth century is coming to an end Historians may perhaps come to refer to it as the century of information just as its predecessor is associated with the process of industrialisation Successive technological developments such as the telephone radio television computers and the Internet have had profound effects on the way we live We can see pictures of the surface of Mars or the early shape of the Universe The contents of a whole shelf load of library books can be compressed onto an almost weightless piece of plastic Billions of people can watch the same football match or can keep in instant touch with friends around the world without leaving home In short massive amounts of information can now be stored transmitted and processed with surprising speed accuracy and economy Of course these developments do not happen without some theoretical basis and as is so often the case much of this is provided by mathematics Many of the first mathematical advances in this area were made in the mid twentieth century by engineers often relying on intuition and experience rather than a deep theoretical knowledge to lead them to their discoveries Soon the mathematicians delighted to see new applications for their subject joined in and developed the engineers practical examples into wide ranging theories complete with definitions theorems and proofs
