## NAME

lisp - lisp interpreter

## SYNOPSIS

lisp

## DESCRIPTION

Lisp is a lisp interpreter for a dialect which closely resembles MIT's MACLISP. This lisp, known as FRANZ LISP, features an I/O facility which allows the user to change the input and output syntax, add macro characters, and maintain compatibility with upper-case only lisp systems; infinite precision integer arithmetic, and an error facility which allows the user to trap system errors in many different ways. Interpreted functions may be mixed with code compiled by liszt(1) and both may be debugged using the "Joseph Lister" trace package. A lisp containing compiled and interpreted code may be dumped into a file for later use.

Levin, 1962-08-15 The manual describes LISP a formal mathematical language LISP differs from most programming languages in three important ways The first way is in the nature of the data The LISP language is designed primarily for symbolic data processing used for symbolic calculations in differential and integral calculus electrical circuit theory mathematical logic game playing and other fields of artificial intelligence The manual describes LISP a formal mathematical language LISP differs from most programming languages in three important ways The first way is in the nature of the data In the LISP language all data are in the form of symbolic expressions usually referred to as S expressions of indefinite length and which have a branching tree type of structure so that significant subexpressions can be readily isolated In the LISP system the bulk of the available memory is used for storing S expressions in the form of list structures The second distinction is that the LISP language is the source language itself which specifies in what way the S expressions are to be processed Third LISP can interpret and execute programs written in the form of S expressions Thus like machine language and unlike most other high level languages it can be used to generate programs for further executions
