Life Insurance Mathematics Hans U. Gerber, 2013-03-09 Halley's Comet has been prominently displayed in many newspapers during the last few months. For the first time in 76 years it appeared this winter in the nocturnal sky. This is an appropriate occasion to clearly point out the fact that Sir Edmund Halley also constructed the world's first life table in 1693, thus creating the scientific foundation of life insurance. Halley's life table and its successors were viewed as deterministic laws, i.e., the number of deaths in any given group and year was considered to be a well-defined number that could be calculated by means of a life table. However, in reality, this number is random. Thus, any mathematical treatment of life insurance will have to rely more and more on probability theory. By sponsoring this monograph, the Swiss Association of Actuaries wishes to support the modern probabilistic view of life contingencies. We are fortunate that Professor Gerber, an internationally renowned expert, has assumed the task of writing the monograph. We thank the Springer Verlag and hope that this monograph will be the first in a successful series of actuarial texts. Zurich, March 1986. Hans Bihlmann, President, Swiss Association of Actuaries. Preface. Two major developments have influenced the environment of actuarial mathematics. One is the arrival of powerful and affordable computers; the once important problem of numerical calculation has become almost

Yager, 2010-10-05 Decision making is an omnipresent most crucial activity of the human being and also of virtually all artificial broadly perceived intelligent systems that try to mimic human behavior reasoning and choice processes It is quite obvious that such a relevance of decision making had triggered vast research effort on its very essence and attempts to develop tools and techniques which would make it possible to somehow mimic human decision making related acts even to automate decision making processes that had been so far reserved for the human beings The roots of those attempts at a scientific analysis can be traced to the ancient times but clearly they have gained momentum in the recent 50 or 100 years following a general boom in science Depending on the field of science decision making can be viewed in different ways The most general view can be that decision making boils down to some cognitive mental processes that lead to the selection of an option or a course of action among several alternatives Then looking in a deeper way from a psychological perspective this process proceeds in the context of a set of needs preferences rational choice of an individual a group of individuals or even an organization From a cognitive perspective the decision making process proceeds in the context of various interactions with the environment [Actuarial Models](#) Vladimir I.
