Machine Learning for Beginners Alec Gilliam,2018-05-09 Machine Learning Machine learning is the ability of artificial intelligence to learn and adapt without being explicitly programmed to perform a pre prescribed outcome It is a machine s ability to act on its own to learn Many forms of artificial intelligence use a wide variety of tactics to employ this including pattern recognition and unsupervised learning algorithms Currently there is a lot of excitement and focus on machine learning in the world of programming as it is often interpreted to imply a limitless future in artificial intelligence a world in which machines could adapt and respond to a wide variety of stimuli and factors without direct programming response from

a human A world in which machines could learn and adapt on their own Often machine learning is seen as the missing human element in machines the ability for machines to start to fill the gap between what makes us human and what makes machines a sense of responsiveness and flexibility in a given environment and a set of circumstances By and large the goal of learning is to be able to generalize to take a set of lived circumstances and to be able to extrapolate a sense of patterning about what the future holds and how the person should respond to similar given situations Machine learning is similar it is the attempt to program machines so that they can generalize about future possibilities and probabilities based on data sets In short machine learning is the quest to get machines to think like humans This takes a wide variety of forms and is used for a wide variety of purposes In the following book we will explore the history of machine learning the academic and scientific elements that make up the study as well as touching on this moral and philosophical space that they occupy In this book you will find What is Machine Learning The History of Machine Learning Examples of Machine Learning How Does Machine Learning Work Common Approaches and Terms in Machine Learning Theoretical Computer Science Computational Learning Theory Association Rule Learning Pattern Recognition Deep Learning Induction Logic Reasoning Neural networks Expert Systems Naive Bayes Systems Unsupervised and supervised learning algorithms Decision Trees Random Decision Forests The Moral and Philosophical Implications of Machine Learning *Machine Learning* Peter Bradley,2018-09-13 Do you want to know more about Machine Learning and what it means for the future Could Machine Learning help your business to perform better Machine Learning is not a new idea It stems back as far as the 1950s and involves computers learning from basic algorithms without the need for them to be specifically programmed to do so If that sounds a bit like science fiction it isn't Machine Learning is real and is gathering pace and in *Machine Learning A Comprehensive Step by Step Guide to Learning and Understanding Machine Learning Concepts Technology and Principles for Beginners* you can grasp what this means with chapters on What Machine Learning is Basic facts about Machine Learning Types of Machine Learning Real life applications of Machine Learning Artificial Intelligence And much more The way that technology is moving combined with the pace of change means that Machine Learning that is both complex and innovative will be with us very soon That will have implications for us all whether it is with employment in our leisure time or in other aspects of our lives This book serves to give you some idea of what Machine Learning will bring in the future Get a copy today and see what's coming tomorrow

Do you want to understand machine learning How it works and how is correlated to artificial intelligence and deep learning If yes then keep reading Machine Learning is based on mathematics specifically statistics It is a probabilistic discipline that began in the 1950s Despite initial enthusiasm research and development in Machine Learning languished for over 30 years suffering from twin ills of a lack of data to work with and computers that were too slow to effectively work with what data they had It is no accident Machine Learning is coming into its own over the last 10 years Until we began creating and storing massive amounts of data about our world ML was mostly an idea in the minds of statisticians And until computers reached a level of speed and power where these massive data sets could be ingested in a reasonable amount of time the revolution couldn't happen But as we digitize information about our world and ourselves and computers continue to increase in speed and capacity exponentially the ability for Machine Learning to learn from our data grows in depth and accuracy Looking to the future we can see only more and more data collection about our world faster computer chips and data transfer and more avenues for ML to develop in to grow and learn and to serve humanity When most people think of machine learning they either have no idea what it is or they automatically think about artificial intelligence in the form of a robotic species that rivals humans While these fascinating subspecies may one day exist as the result of machine learning developments right now the primary focus is on how machine learning programs can become excellent at very specific tasks Most machine learning technology is developed in such a way that it is excellent at performing one or at most two tasks By focusing entire technology on one single task they can ensure that it runs that task perfectly and that it does not get confused between the tasks that it is trying to accomplish While simple computing software like the one that runs your computer can easily run multiple programs at once with little chance of crashing the technology that is used to run machine learning technology is far more complex As researchers study it they strive to keep the algorithms mostly separate or specifically focused on completing just one goal on minimizing room for error It is likely that as we become more familiar with machine learning technology and more educated in the algorithms we will start to see more and more machines completing multiple tasks rather than just one At this point that is the long term goal for many scientists who want to see these machines becoming more efficient and requiring less hardware After all the hardware used to run some of these machines is not always the greenest technology so the fewer hardware casings that technology needs to be stored in the less of a footprint the technology sector will have on the planet This book aims to educate you on the truth about machine learning This book gives a comprehensive guide on the following What is Machine Learning Machine Learning Categories Sectors and Industries that
