Lectures on Field Theory and Topology Daniel S. Freed, 2019-08-23 These lectures recount an application of stable homotopy theory to a concrete problem in low energy physics the classification of special phases of matter While the joint work of the author and Michael Hopkins is a focal point a general geometric frame of reference on quantum field theory is emphasized Early lectures describe the geometric axiom systems introduced by Graeme Segal and Michael Atiyah in the late 1980s as well as subsequent extensions This material provides an entry point for mathematicians to delve into quantum field theory Classification theorems in low dimensions are proved to illustrate the framework The later lectures turn to more specialized topics in field theory including the relationship between invertible field theories and stable homotopy theory extended unitarity anomalies and relativistic free fermion systems The accompanying mathematical explanations touch upon higher category theory duals to the sphere spectrum equivariant spectra differential cohomology and Dirac operators The outcome of computations made using the Adams spectral sequence is presented and compared to results in the condensed matter literature obtained by very different means The general perspectives and specific applications fuse into a compelling story at the interface of contemporary mathematics and theoretical physics

Quantum Fields and Strings Pierre Deligne, 1999 Ideas from quantum field theory and string theory have had considerable impact on mathematics since the 1980s Advances in many different areas have been inspired by insights from physics In 1996-97 the Institute for Advanced Study Princeton NJ organized a special year long programme designed to teach mathematicians the basic physical ideas which underlie the mathematical applications

A Mathematical Introduction to Conformal Field Theory Martin Schottenloher, 2008-09-26 The first part of this book gives
