Q1: A river is flowing from west to east at a speed of 5 metres per minute. A man on the south bank of the river, capable of swimming at 10 metres per minute in still water, wants to swim across the river in the shortest time. He should swim in a direction.

1. due north
2. 30° east of north
3. 30° west of north
4. 60° east of north

Solution:

Let the time taken to cross the river be t

$$t = d/V_s \cos \theta$$

For the time t to be minimum, $\cos \theta$ should be maximum

θ should be 0

Therefore swimmer should swim due north

Answer: (1) due north

Q2: A particle P is sliding down a frictionless hemispherical bowl. It passes point A at $t = 0$. At this instant of time, the horizontal component of its velocity is v . A bead Q of the same mass as P is ejected from A at $t = 0$ along the horizontal string AB , with speed v . Friction between the bead and the string may be neglected. Let t_p and t_q be the respective times taken by P and Q to reach point B .

Solving Inverse Kinematics Problems by Decomposition, Classification and Simple Modeling, 2013 Inverse kinematics is a major problem in robotics and computer animation This problem does not always have a unique solution and sometimes there may not be any solution at all The forward relations for kinematics are generally complex which makes it difficult to determine their inverse relation mathematically In other words there is no closed form solution for such problems In this thesis we solve the inverse kinematics for a manipulator with six links and six variable joints where the position and orientation of the end effector are the output and the joint angles are the input We have used an approach based on decomposition of output space into cells with the input space correspondingly divided into regions Solutions are identified using a clustering method in which the relationships between data in an output cell and clusters in the corresponding input region are modeled by simple polynomials The method has been implemented and evaluated for accuracy and compared with other methods for solving inverse kinematics problem The results show that the proposed method is fast and accurate in finding all the solutions when they exist
