The Art of Modeling in Science and Engineering with Mathematica Diran Basmadjian, 2019-07-17 Modeling is practiced in engineering and all physical sciences Many specialized texts exist written at a high level that cover this subject However students and even professionals often experience difficulties in setting up and solving even the simplest of models This can be attributed to three difficulties the proper choice of model the absence of precise solutions and the necessity to make suitable simplifying assumptions and approximations Overcoming these difficulties is the focus of The Art of Modeling in Science and Engineering The text is designed for advanced undergraduate and graduate students and practicing professionals in the sciences and engineering with an interest in Modeling based on Mass Energy and Momentum or Force Balances The book covers a wide range of physical processes and phenomena drawn from chemical mechanical civil environmental sciences and bio sciences A separate section is devoted to real World industrial problems The author explains how to choose the simplest model obtain an appropriate solution to the problem and make simplifying assumptions approximations

Numerical Methods for Chemical Engineers with MATLAB Applications A. Constantinides, Navid Mostoufi, 1999 Master numerical methods using MATLAB today s leading software for problem solving This complete guide to numerical methods in chemical engineering is the first to take full advantage of MATLAB s powerful calculation environment Every chapter contains several examples using general MATLAB functions that implement the method and can also be applied to many other problems in the same category The authors begin by introducing the solution of nonlinear equations using several standard approaches including methods of successive substitution and linear interpolation the Wegstein method the Newton Raphson method the Eigenvalue method and synthetic division algorithms With these fundamentals in hand they move on to simultaneous linear algebraic equations covering matrix and vector operations Cramer s rule Gauss methods the Jacobi method and the characteristic value problem Additional coverage includes Finite difference methods and interpolation of equally and unequally spaced points Numerical differentiation and integration including differentiation by backward forward and central finite differences Newton Cotes formulas and the Gauss Quadrature Two detailed chapters on ordinary and partial differential equations Linear and nonlinear regression analyses including least squares estimated vector of parameters method of steepest descent Gauss Newton method Marquardt Method Newton Method and multiple nonlinear regression The numerical methods covered here represent virtually all of those commonly used by practicing chemical engineers The focus on MATLAB enables readers to

accomplish more with less complexity than was possible with traditional FORTRAN For those unfamiliar with MATLAB a brief introduction is provided as an Appendix Over 60 MATLAB examples methods and function scripts are covered and all of them are included on the book's CD
