Machine learning is a branch of artificial intelligence which involves the design and development of systems capable of self improvements showing an improvement in performance based upon their previous experiences In other words these systems can learn by processes similar to human learning process Machine learning algorithms can be classified into two broad categories supervised and the unsupervised In supervised learning algorithms the training data includes both inputs and outputs The outputs answers

to the problems are known as targets These in supervising the machine learning model as it tries to identify trends and patterns underlying your data In unsupervised learning algorithms the training data includes inputs only he targets are not provided The answers to the inputs have to be discovered through a deep search There are a number of steps which must be followed during the course of machine learning These include collecting and preparing the data and training validating and then applying the model When all these steps are completed you will be able to use your model to make predictions Machine learning is a new and growing field and its emergence is a promising answer to the unimaginable quantities of data which will be generated by organizations and individuals during the upcoming years The predictive capacity of the various machine learning algorithms is most attractive to businesses who are rushing to incorporate machine learning into their day to day operations Machine learning can help businesses predict future performance and make necessary adjustments in order to remain stable and even to increase profits This guide has been compiled to take you through the basics of machine learning that includes artificial intelligence big data and machine learning with python Here are some of the chapters covered Definition of machine learning and its categories How different models work on new data Machine Learning Tools Fundamental Algorithms and Concepts of Probability Chapter 7 Data Scrubbing Setting up your data Regression Analysis Clustering Artificial Neural Network Ensemble Modeling Building a Model in Python Model Optimization Practical Codes and Exercises to Use Python And finally where to go from here Clearly the future of machine learning is bright Machine learning models can make the work of human beings easier This fact alone should be enough to motivate human beings toward learning machine learning
