

WGU C723 Quantitative Analysis for Business

Decision models - ✓are used to identify a business problem and develop alternative solutions.

Payoff tables - ✓will quantify the costs and benefits of each solution alternative.

Decision trees - ✓will be used to identify the alternatives and probabilities of occurrence.

Network analysis - ✓refers to the network of activities required to complete a business project.

Quantitative analysis - ✓provides methods to analyze large or small amounts of data to look for patterns, trends, and relationships.

Mathematical analysis - ✓can help managers make strategic decisions and find statistically supported solutions to business questions. These are functional areas over a period of time.

Data may be categorized as either - ✓subjective or objective.

Subjective data - ✓obtained through surveys and interviews, are considered non-measurable,

data typically include personal perceptions, such as likes, dislikes, attitudes, and opinions.

Objective data are - ✓measurable and typically arise from observation or testing in business areas like sales, operations, manufacturing, and logistics.

Data must be valid: that is, the data must accurately represent the true business relationship at hand. Further, the data must be reliable: if we sought to characterize a particular business relationship by gathering data several different times (different samples), the data would reflect the relationship the same way with every sample.

Examples of quantitative analysis - ✓cost-benefit analysis, inventory analysis, logistical analysis, and forecasting revenue.

Quantitative Analysis For Business Questions And Answers:

Refining Design for Business Michael Krypel, 2014-03-23 Innovation and technology have forever changed what it means to be a business. Some businesses now exist only online increasingly companies are being built with new technologies that require new skills and customers are routinely accessing businesses via interactive visual and audio experiences through web pages or apps computers and mobile devices. These experiences are based on design which has never been so important to the business world. Customers interact with designs by looking clicking typing listening speaking to and touching them. These interactions largely occur where and when the customer chooses alone on the couch at home at work at social events while traveling on an airplane and elsewhere. When people say they read an article bought a friend a gift watched a video or booked a hotel they're talking about engaging with businesses by interacting with their designs. No matter how great a business idea is or what technology it relies on behind the scenes a company needs to express itself visually in a way customers will understand and be able to interact with easily in order to be successful. The number of ways to translate an idea into a design is infinite but which designs will also drive customer value. Michael Krypel's **Refining Design for Business** answers this key question showing you how to build a successful online business by creating engaging and measurable customer experiences. In this book you will learn how to Change the standard design process most companies follow to enhance accountability for generating business and customer value while creating new opportunities for collaboration and innovation. Understand customer goals and build a strategic marketing plan to continually realign the business around them. Use A/B testing and segmentation strategies to personalize experiences across a business. Develop new approaches through visual business cases that show how different companies have solved problems including before and after examples of what the online businesses themselves actually looked like.
