

GEOPHYSICAL METHODS OF EXPLORATION

CORE DRILLING

Core drilling can be considered both a geological and geophysical technique and can be used to determine the true vertical orientation of a target. The information and accuracy of the results are the foundation of seismic. Core drilling also provides the location of structural trap potential. Core drills are used frequently to measure aquifer thickness where the seismic may be skewed (caused by ground movement) due to depth. The two methods are combined and combined geophysical logging (geological and geophysical) is used to provide a more complete picture of the target. Geophysical and seismic methods are used throughout exploration since they are usually more precise.
