Rockafellar Convex Analysis:

Convex Analysis Ralph Tyrrell Rockafellar, 2015-04-29 Available for the first time in paperback R Tyrrell Rockafellar's classic study presents readers with a coherent branch of nonlinear mathematical analysis that is especially suited to the study of optimization problems Rockafellar's theory differs from classical analysis in that differentiability assumptions are replaced by convexity assumptions The topics treated in this volume include systems of inequalities the minimum or maximum of a convex function over a convex set Lagrange multipliers minimax theorems and duality as well as basic results about the structure of convex sets and the continuity and differentiability of convex functions and saddle functions This book has firmly established a new and vital area not only for pure mathematics but also for applications to economics and engineering A sound knowledge of linear algebra and introductory real analysis should provide readers with sufficient background for this book There is also a guide for the reader who may be using the book as an introduction indicating which parts are essential and which may be skipped on a first reading

Advances in Convex Analysis and Global Optimization Nicolas Hadjisavvas, Panos M. Pardalos, 2013-12-01 There has been much recent progress in global optimization algorithms for nonconvex continuous and discrete problems from both a theoretical and a practical perspective. Convex analysis plays a fundamental role in the analysis and development of global optimization algorithms. This is due essentially to the fact that virtually all nonconvex optimization problems can be described using differences of convex functions and differences of convex sets. A conference on Convex Analysis and Global Optimization was held during June 5-9, 2000 at Pythagorion Samos, Greece. The conference was honoring the memory of C. Caratheodory (1873-1950) and was endorsed by the Mathematical Programming Society (MPS) and by the Society for Industrial and Applied Mathematics (SIAM) Activity Group in Optimization. The conference was sponsored by the European Union through the EPEAEK program, the Department of Mathematics of the Aegean University, and the Center for Applied Optimization of the University of Florida, by the General Secretariat of Research and Technology of Greece, by the Ministry of Education of Greece, and several local Greek government agencies and companies. This volume contains a selective collection of refereed papers based on invited and contributing talks presented at this conference. The two themes of convexity and global optimization pervade this book. The conference provided a forum for researchers working on different aspects of convexity and global optimization to present their recent discoveries and to interact with people working on complementary aspects of mathematical programming.

Fundamentals of Convex Analysis Jean-Baptiste Hiriart-Urruty, Claude Lemaréchal, 2012-12-06 This book is an abridged version of the two volumes *Convex Analysis and Minimization Algorithms I and II* (Grundlehren der mathematischen Wissenschaften, Vol. 305 and 306). It presents an introduction to the basic concepts in convex analysis and a study of convex minimization problems with an emphasis on numerical algorithms. The backbone of both volumes was extracted, some material deleted which was deemed too advanced for an introduction or too closely attached to numerical algorithms. Some exercises were included, and finally the index has been considerably enriched, making it an excellent choice for the purpose of learning and teaching.

Fundamentals of Convex Analysis and Optimization Rafael Correa, Abderrahim Hantoute, Marco A. López, 2023-07-11 This book aims at an innovative approach within the framework of convex analysis and optimization based on an in-depth study of the behavior and properties of the supremum of families of convex functions. It presents an original and systematic treatment of convex analysis covering standard results and improved calculus rules in subdifferential analysis. The tools supplied in the text allow a direct approach to the mathematical foundations of convex optimization, in particular to optimality and duality theory. Other applications in the book concern convexification processes in optimization, nonconvex integration of the Fenchel subdifferential, variational characterizations of convexity, and the study of Chebyshev sets. At the same time, the underlying geometrical meaning of all the involved concepts and operations is highlighted and duly emphasized. A notable feature of the book is its unifying methodology, as well

as the novelty of providing an alternative or complementary view to the traditional one in which the discipline is presented to students and researchers This textbook can be used for courses on optimization convex and variational analysis addressed to graduate and post graduate students of mathematics and also students of economics and engineering It is also oriented to provide specific background for courses on optimal control data science operations research economics game theory etc The book represents a challenging and motivating development for those experts in functional analysis convex geometry and any kind of researchers who may be interested in applications of their work
