Biocentrism Robert Lanza, Bob Berman, 2011 Robert Lanza is one of the most respected scientists in the world a US News and World Report cover story called him a genius and a renegade thinker even likening him to Einstein Lanza has teamed with Bob Berman the most widely read astronomer in the world to produce *Biocentrism* a revolutionary new view of the universe Every now and then a simple yet radical idea shakes the very foundations of knowledge The startling discovery that the world was not flat challenged and ultimately changed the way people perceived themselves and their relationship with the world For most humans of the 15th century the notion of Earth as ball of rock was nonsense The whole of Western natural philosophy is undergoing a sea change again increasingly being forced upon us by the experimental findings of quantum theory and at the same time toward doubt and uncertainty in the physical explanations of the universes genesis and structure *Biocentrism* completes this shift in worldview turning the planet upside down again with the revolutionary view that life creates the universe instead of the other way around In this paradigm life is not an accidental byproduct of the laws of physics *Biocentrism* takes the reader on a seemingly improbable but ultimately inescapable journey through a foreign universe our own from the viewpoints of an acclaimed biologist and a leading astronomer Switching perspective from physics to biology unlocks the cages in which Western science has unwittingly managed to confine itself *Biocentrism* will shatter the readers ideas of life time and space and even death At the same time it will release us from the dull worldview of life being merely the activity of an admixture of carbon and a few other elements it suggests the exhilarating possibility that life is fundamentally immortal The 21st century is predicted to be the Century of Biology a shift from the previous century dominated by physics It seems fitting then to begin the century by turning the universe outside in and unifying the foundations of science with a simple idea discovered by one of the leading life scientists of our age *Biocentrism* awakens in readers a new sense of possibility and is full of so many shocking new perspectives that the reader will never see reality the same way again

The Grand Biocentric Design Robert Lanza, Matej Pavsic, Bob Berman, 2020-11-17 What if life isn't just a part of the universe what if it determines the very structure of the universe itself The theory that blew your mind in *Biocentrism* and *Beyond Biocentrism* is back with brand new research revealing the startling truth about our existence What is consciousness Why are we here Where did it all come from the laws of nature the stars the universe Humans have been asking these questions forever but science hasn't succeeded in providing many answers until now In *The Grand Biocentric Design* Robert Lanza one of Time Magazine's 100 Most Influential People is joined by theoretical physicist Matej Pavsic and astronomer Bob Berman to shed light on the big picture that has long eluded philosophers and scientists alike This engaging mind stretching exposition of how the history of physics has led us to *Biocentrism* the idea that life creates reality takes readers on a step by step adventure into the great science breakthroughs of the past centuries from Newton to the weirdness of quantum theory culminating in recent revelations that will challenge everything you think you know about our role in the

universe This book offers the most complete explanation of the science behind Biocentrism to date delving into the origins of the memorable principles introduced in previous books in this series as well as introducing new principles that complete the theory The authors dive deep into topics including consciousness time and the evidence that our observations or even knowledge in our minds can affect how physical objects behave The Grand Biocentric Design is a one of a kind groundbreaking explanation of how the universe works and an exploration of the science behind the astounding fact that time space and reality itself all ultimately depend upon us

Beyond Biocentrism Robert Lanza, Bob Berman, 2016-05-03. Biocentrism shocked the world with a radical rethinking of the nature of reality. But that was just the beginning. In *Beyond Biocentrism*, acclaimed biologist Robert Lanza, one of TIME Magazine's 100 Most Influential People in 2014, and leading astronomer Bob Berman take the reader on an intellectual thrill ride as they re-examine everything we thought we knew about life, death, the universe, and the nature of reality itself. The first step is acknowledging that our existing model of reality is looking increasingly creaky in the face of recent scientific discoveries. Science tells us, with some precision, that the universe is 26.8 percent dark matter, 68.3 percent dark energy, and only 4.9 percent ordinary matter, but must confess that it doesn't really know what dark matter is and knows even less about dark energy. Science is increasingly pointing toward an infinite universe but has no ability to explain what that really means. Concepts such as time, space, and even causality are increasingly being demonstrated as meaningless. All of science is based on information passing through

our consciousness but science hasn't the foggiest idea what consciousness is and it can't explain the linkage between subatomic states and observation by conscious observers Science describes life as a random occurrence in a dead universe but has no real understanding of how life began or why the universe appears to be exquisitely designed for the emergence of life The biocentrism theory isn't a rejection of science Quite the opposite Biocentrism challenges us to fully accept the implications of the latest scientific findings in fields ranging from plant biology and cosmology to quantum entanglement and consciousness By listening to what the science is telling us it becomes increasingly clear that life and consciousness are fundamental to any true understanding of the universe This forces a fundamental rethinking of everything we thought we knew about life death and our place in the universe
