- The theory that species change over time: Evolution
- The offspring of two different species, such as a liger: Hybrid
- Refers to the number of individuals in a population with a trait: frequency
- The process by which evolution occurs: natural selection
- Refers to differences in individual in a population, like light versus dark mice: Variation
- Refers to how traits are passed from parents to offspring: Inheritance
- Traits that help organisms survive and reproduce: adaptations
- Process by which humans create organisms with desirable traits: artificial selection
- The idea that each living species descended from other species: common descent
- A diagram that shows features common to groups or populations: Cladogram
- The formation of new species: speciation
- Remains of organisms that lived in the past: fossils
- Structures that are similar in related organisms, like bones of the arm: homologous
- A vestigial structure is a part of the body that has no function; evidence of evolution.
- Famous birds studied by Darwin on the Galapagos: finches

We studied different animals to understand evolution. Summarize how each of the examples below illustrate evolution by natural selection.

16. Rock pocket mice

the rock pocket mice evolved through the environment and overtime the color and gene of the mice started to change to the all the environment so they changed to blend in so they're not in danger.

17. Elephants (tusks)

Some of the elephants didn't have tusks mostly the girls because of a sex-linked gene.

18. Beaks of finches in the Galapagos

the different beaks got longer and evolved as time went on and got longer as the environment changed.

Theory Of Evolution Reinforcement And Study Guide:

Theories of Personality Jess Feist,1994 Accurate and authoritative Theories of Personality by Jess and Gregory Feist presents 23 leading theories of personality in a thorough interesting and logical manner The book begins with an introductory chapter designed to acquaint students with the meaning of personality and provide them with a solid foundation for understanding the nature of theory and its crucial contributions to science The next seventeen chapters present twenty three major theories with a fresh approach and a more complete view encompassing a biographical sketch of each theorist related research and applications to real life When appropriate the authors point out ways in which the theorists life experiences may have helped shape her or his theory

Theoretical Aspects of Evolutionary Computing Leila Kallel,Bart Naudts,Alex Rogers,2013-03-09 During the first week of September 1999 the Second EvoNet Summer School on Theoretical Aspects of Evolutionary Computing was held at the Middelheim cam pus of the University of Antwerp Belgium Originally intended as a small get together of PhD students interested in the theory of evolutionary computing the summer school grew to become a successful combination of a four day workshop with over twenty researchers in the field and a two day lecture series open to a wider audience This book is based on the lectures and workshop contributions of this summer school Its first part consists of tutorial papers which introduce the reader to a num ber of important directions in the theory of evolutionary computing The tutorials are at graduate level and assume only a basic background in mathematics and computer science No prior knowledge of evolutionary computing or its theory is necessary The second part of the book consists of technical papers selected from the workshop contributions A number of them build on the material of the tutorials exploring the theory to research level Other technical papers may require a visit to the library
