*Statistics Through Applications* Daren S. Starnes, David S. Moore, Dan Yates, 2009-12-25 Watch a video introduction here  
Statistics Through Applications STA is the only text written specifically for high school statistics course Designed to be read the book takes a data analysis approach that emphasizes conceptual understanding over computation while recognizing that some computation is necessary The focus is on the statistical thinking behind data gathering and interpretation The high school statistics course is often the first applied math course students take STA engages students in learning how statisticians contribute to our understanding of the world and helps students to become more discerning consumers of the statistics they encounter in ads economic reports political campaigns and elsewhere New and improved STA 2e features expanded coverage of probability a reorganized presentation of data analysis a new color design and much more Please see the posted sample chapter or request a copy today to see for yourself [Plane Answers to Complex Questions](#) Ronald Christensen, 2013-03-09 The third edition of *Plane Answers* includes fundamental changes in how some aspects of the theory are handled Chapter 1 includes a new section that introduces generalized linear models Primarily this provides a definition so as to allow comments on how aspects of linear model theory extend to generalized linear models For years I have been unhappy with the concept of estimability Just because you cannot get a linear unbiased estimate of something does not mean you cannot estimate it For example it is obvious how to estimate the ratio of two contrasts in an ANOVA just estimate each one and take their ratio The real issue is that if the model matrix  $X$  is not of full rank the parameters are not identifiable Section 2.1 now introduces the concept of identifiability and treats estimability as a special case of identifiability This change also resulted in some minor changes in Section 2.2 In the second edition Appendix F presented an alternative approach to dealing with linear parametric constraints In this edition I have used the new approach in Section 3.3 I think that both the new approach and the old approach have virtues so I have left a fair amount of the old approach intact Chapter 8 contains a new section with a theoretical discussion of models for factorial treatment structures and the introduction of special models for homologous factors This is closely related to the changes in Section 3.3 *Statistics Catalog 2005* Neil Thomson, 2004-09
