A Guide To Dissection Of The Human Body Frederick Peter Lisowski,1998-12-15 This invaluable manual is intended to guide and facilitate human anatomical dissections It is flexible enough for use in long as well as short courses and is thus structured in such a way that the dissection of the body can be completed in 110 to 160 hours Although some medical schools have reduced the amount of dissection the North American schools have lengthened their courses The manual can also be used in those courses where only part of the body is dissected and even in the study of prosected material It can be particularly useful as a link with real anatomy when used together with computerised anatomy programs many curricula emphasise that the student should go back and forth between the body and computer programs The guide is also useful where students do not dissect but merely look at atlases prosections and models by providing a link to real living and variable anatomy Nowadays many anatomy courses are aimed solely at systems anatomy Although important as systems are regions are clinically vital since many more problems concern damage to several systems because the lesions are regional This is where the guide is of considerable help There is an introduction for each anatomical region and for each section to be dissected there is an overview a dissection schedule which guides the student through a set of instructions a summary and a list of objectives that are clinically important The terminology used is the latest This manual is suitable for medical dental osteopathy and chiropody schools as well as human biology and science programs that include dissection in their undergraduate gross anatomy course It is also of value for advanced knowledge of anatomy for surgery as required by further qualifications and in relation to specialised training involving interpretation of normal anatomy in non invasive imaging of anatomy for clinical diagnosis practice of clinical surgical skills on cadaveric material and in discussions about clinical problems
