## Basic CCNA Interview Questions AND Answers

by Shabeer ibm

### What is Routing?

Routing is the process of selecting best paths in a network and forward data from source to destination through it. Routing is usually performed by a dedicated device called a router.

### What is Protocol?

A 'protocol' is a set of invisible computer rules that enable two devices to connect and transmit data to one another. Protocols determine how data are transmitted between computing devices and over networks.

### Explain difference between Router, Switch and Hub?

Hubs, switches, and routers are all computer networking devices with varying capabilities. Let's look in detail

#### Hub

A hub is typically the least expensive, least intelligent, and least complicated of the three. Its job is very simple – anything that comes in one port is sent out to the others. Hub has single collision domain and single broadcast domain

#### Switch

Switch is a device that filters and forwards packets between LAN segments. Switches operate at the data link layer (layer 2) and sometimes the network layer (layer 3) of the OSI Reference Model and therefore support any packet protocol. Switches have multiple collision domains and have a single broadcast domain

#### Router
