CONCUR 2005 - Concurrency Theory Martín Abadi, Luca de Alfaro, 2005-09-07 This volume contains the papers presented at CONCUR 2005 the 16th International Conference on Concurrency Theory The purpose of the CONCUR series of conferences is to bring together researchers developers and students in order to advance the theory of concurrency and to promote its applications This year's conference was in San Francisco California from August 23 to August 26 We received 100 submissions in response to a call for papers Each submission was assigned to at least three members of the Program Committee in many cases reviews were solicited from outside experts The Program Committee discussed the submissions electronically judging them on their perceived importance originality clarity and appropriateness to the expected audience The Program Committee selected 38 papers for presentation Because of the format of the conference and the high number of submissions many good papers could not be included Although submissions were read and evaluated the papers that appear in this volume may differ in form and contents from the corresponding submissions It is expected that many of the papers will be further revised and submitted to refereed archival journals for publication

Soft Methodology and Random Information Systems Miguel Concepcion Lopez-Diaz, Maria Angeles Gil, Przemyslaw Grzegorzewski, Olgierd Hryniewicz, Jonathan Lawry, 2013-06-05 The analysis of experimental data resulting from some underlying random process is a fundamental part of most scientific research Probability Theory and Statistics have been developed as flexible tools for this analysis and have been applied successfully in various fields such as Biology Economics Engineering Medicine or Psychology However traditional techniques in Probability and Statistics were devised to model only a single source of uncertainty namely randomness In many real life problems randomness arises in conjunction with other sources making the development of additional softening approaches essential This book is a collection of papers presented at the 2nd International Conference on Soft Methods in Probability and Statistics SMPS 2004 held in Oviedo providing a comprehensive overview of the innovative new research taking place within this emerging field

Survival trees - a new method in innovation theory: A successful introduction of a method commonly used in survival analysis into the field of innovation diffusion theory Burkhard Freiherr von Wangenheim, 2013-06-01 This book deals with survival trees and their application to the analysis and prediction of innovation diffusion processes Three major contributions of the book are noteworthy Firstly the author presents a very comprehensive accurate and accessible overview of the current research activities on survival trees This is particularly important because due to the novelty of the method no universally accepted best approach exists yet many technical details of the method are still subject to ongoing research and debate By providing an overview of the current state of research the author identifies the different approaches that have been proposed

for splitting nodes pruning and final tree selection providing guidance for the choice of an appropriate approach to the applied part of the text Secondly the overview of statistical packages that are available for survival tree analyses and the discussion of their respective merits and limitations has a high practical value and is unique within its category Thirdly the applied part of the text successfully demonstrates the usefulness of the survival tree method to identify clusters with significant differences in expected adoption times thus providing a rigorous and easily interpretable analysis of early and late adopter groups In the discussion section the author further points out how the survival tree method deals with censored observations
