## **1980 Ap Physics C Scoring Guidelines:**

**Gender and Fair Assessment** Warren W. Willingham, Nancy S. Cole, 2013-12-16 There have been many important changes in the participation of women and men in American society over the past quarter century. Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men. They aid the learning process and reflect inequalities in opportunity to learn and participate. In addition, they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students, educational programs, and a wide range of issues. For all of these reasons, it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired. The test performance of women and men is a research topic of historical interest and has received much attention in recent years. Because of this increased interest, there is a great deal of new research and data available. The purpose of the study presented in this volume was to review this new information with two objectives in mind: to clarify patterns of gender difference and similarity in test performance and related achievements, and to see what implications those findings might have for fair assessment and, as a corollary, to examine the assessment process as a possible source of gender differences. This study is interested in tests used in education to assess developed knowledge and skill. In order to gain a broader view of gender similarity and difference, the contributors looked at other types of measures and other characteristics of young women and men. Their hope is to contribute to a firmer basis for insuring fairness in tests, an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience. **Astrochemistry of Cosmic Phenomena** P.D. Singh, 2012-12-06 The IAU symposium No 150 Astrochemistry of Cosmic Phenomena was held at the beautiful and scenic town of Campos do Jordao, Sao Paulo, Brazil, from August 5 to 9, 1991, and was attended by 111 registered participants with 17 accompanied guests from 19 countries. The symposium had a wide-ranging discussion of the chemistry of astronomical environments with an emphasis on the description of molecular processes that critically influence the nature and evolution of astronomical objects and the identification of specific observations that directly address significant astronomical questions. The subject areas of the symposium included atomic and molecular processes at low and high temperatures and photon interactions; the chemical structure of molecular clouds in the Milky Way and in external galaxies; the chemistry of outflows and their interactions with the interstellar medium; the chemical connections between the interstellar medium and the solar system and pregalactic chemistry. The scientific programme comprised of review talks and contributed papers with a general introduction by Professor A Dalgarno and a final overview of the whole symposium by Professor D A Williams. Financial supports from the Sao Paulo State Foundation Support FAPESP, Brazilian National Research Council CNPq, Finance Company of Studies and Projects FINEP, Institute of Astronomy and Geophysics of University of Sao Paulo IAG USP and International Astronomical Union IAU are gratefully acknowledged.
