Abstract

Over the last 20 years Brazil has been the stage where subsea processing and boosting (P&B) technology has supported and pushed the offshore oil and gas production to overcome its challenges and maximize field production and recovery factor.

Subsea Oil-Water and Gas-Liquid Separation Systems, Multiphase Pumps, Electrical Submersible Pumps, Raw Water Injection Systems, and other innovative, enabler, optimizer or even disruptive technologies have been developing and applying in Brazil's fields to increase the NPV of projects and make feasible long tiebacks scenarios.

This paper will present a retrospective of the most significant P&B systems developed and deployed in Brazil's fields, their operational experience, lessons learned, the next generation under development to surpass Pre-Salt and brown fields challenges and some initiatives to maximize these technologies applications.

Introduction

Subsea P&B technologies have been applied and considered as alternative in several production offshore systems, both at green and brown field scenarios in the last two decades. In some cases, the use of these technologies presents as main benefits the increasing of oil production, the optimization of topsides production infrastructure and the feasibility of long tie-backs production wells. Some of these technologies also can be used as alternative to attenuate flow assurance issues, such as riser cooling thermodynamic effects (Joule-Thompson effect) as well as the maintenance of the flow temperature above WAT (wax appearance temperature) in fields with high potential of paraffin deposition. Additionally, subsea gas-liquid and oil-water separation systems have a huge potential to optimize offshore processing plants and, in some cases, take the place of offshore O&G production units.

Due to the great advantages of P&B technologies, the O&G Companies have been considering ways to maximize its application around the world, particularly in Brazil's scenarios, where Operators have installed more than 40 subsea processing and boosting equipment since 1994, increasing their fields
