and materials Engine power efficiency durability reliability and more recently emissions have always been of primary importance to the automotive world The expanding use of electrification biofuels CNG high pressure fuel delivery systems combustion air management turbocharging supercharging and low viscosity lubricants have been the focus of race engine development and are now turning up in dealer showrooms The papers in this publication were selected for two reasons they demonstrate the leadership that racing plays in the future of automotive engineering and design as it relates to engines and they will be interesting to everyone who may be in racing and to those who may want to be in racing
