A Novel Ontology and Machine Learning Driven Hybrid Clinical Decision Support Framework for Cardiovascular Preventative Care Kamran Farooq, 2016-06-16 Doctoral Thesis Dissertation from the year 2015 in the subject Computer Sciences Artificial Intelligence grade University of Stirling Computing Science and Mathematics language English abstract Clinical risk assessment of chronic illnesses is a challenging and complex task which requires the utilisation of standardised clinical practice guidelines and documentation procedures in order to ensure consistent and efficient patient care Conventional cardiovascular decision support systems have significant limitations which

include the inflexibility to deal with complex clinical processes hard wired rigid architectures based on branching logic and the inability to deal with legacy patient data without significant software engineering work In light of these challenges we are proposing a novel ontology and machine learning driven hybrid clinical decision support framework for cardiovascular preventative care An ontology inspired approach provides a foundation for information collection knowledge acquisition and decision support capabilities and aims to develop context sensitive decision support solutions based on ontology engineering principles The proposed framework incorporates an ontology driven clinical risk assessment and recommendation system ODCRARS and a Machine Learning Driven Prognostic System MLDPS integrated as a complete system to provide a cardiovascular preventative care solution The proposed clinical decision support framework has been developed under the close supervision of clinical domain experts from both UK and US hospitals and is capable of handling multiple cardiovascular diseases **Advances in Case-based Reasoning** ,1998 *Advanced Lectures on Machine Learning* ,2003
