Java Web Services David A. Chappell, 2002 For many Java developers web services appeared to come out of nowhere Its advantages are clear web services are platform independent like Java itself language agnostic a clear advantage over Java RMI can easily be tunneled through firewalls an obvious benefit to anyone who has dealt with modern enterprise networks object oriented we all know about that and tends to be loosely coupled allowing more flexible application development But these advantages have been obscured by a cloud of hype and a proliferation of jargon that are difficult to penetrate What are SOAP UDDI WSDL and JAXM To say nothing of JAXR tModels category bags WSFL and other friends And assuming that you understand what they are how do you do anything with them Do they live up to their promises Are they really the future of network computing or a dead end Java Web Services gives the experienced Java developer a way into the Web Services world It helps you to understand what's going on what the technologies mean and how they relate and shows Java developers how to put them to use to solve real problems You'll learn what's real and what isn't what the

technologies are really supposed to do and how they do it Java Web Services shows you how to use SOAP to perform remote method calls and message passing how to use WSDL to describe the interface to a web service or understand the interface of someone else's service and how to use UDDI to advertise publish and look up services in each local or global registry Java Web Services also discusses security issues interoperability issues integration with other Java enterprise technologies like EJB the work being done on the JAXM and JAX RPC packages and integration with Microsoft's NET services The web services picture is still taking shape there are many platforms and APIs to consider and many conflicting claims from different marketing groups And although web services are inherently language independent the fit between the fundamental principles on which Java and web services are based means that Java will almost certainly be the predominant language for web services development If you're a Java developer and want to climb on the web services bandwagon or if you only want to kick the tires and find out what web services has to offer you will find this book indispensable **Java API for RESTful**
