Multispectral Imaging for Terrestrial Applications, 1996 *Ultra-narrowband Multispectral Imaging* Janis Spigulis, 2025

This book provides insight into an unconventional modality of imaging where several spectral images are captured by a single snapshot under multi laser illumination ensuring high speed imaging within extremely narrow spectral bands This method has three distinct advantages if compared to common commercial multispectral imaging systems considerably improved spectral selectivity or colour sensitivity of imaging avoided motion artefacts in the spectral image sets and simpler faster image processing as integrals over the spectral bands of imaging are replaced by numbers of the fixed working wavelengths The basic principles and progress in this field are reviewed focusing on applications for human skin diagnostics and printed forgery detection The designs of ten different lab developed prototypes that implement this method are described along with results of their laboratory clinical and or forensic tests This research leads to the development of new equipment and protocols for better skin diagnostics and the advanced detection of money document and artwork forgeries Chapter 1 explains the basics of spectral imaging including the main principles of multispectral and hyperspectral imaging Chapter 2 introduces the snapshot multi spectral line imaging SMSLI method focusing on lasers as multi wavelength illumination sources Chapter 3 describes multi laser illumination designs while Chapter 4 presents main specifications of the lab assembled prototype devices implementing such designs Results of the test measurements confirming applicability of the developed solutions for analysis mapping of colour pigments in clinical diagnostics and forgery detection are discussed in Chapters 5 and 6 respectively This will be a valuable reference for laser and imaging professionals photonics researchers and engineers clinicians dermatologists plastic surgeons oncologists forensic experts and students of physics chemistry biology medicine and engineering *Multispectral Imaging for Terrestrial Applications II* Joan B. Lurie, Thomas Delaney, 1997

Multispectral Imaging for Terrestrial Applications Brian Huberty, Society of Photo-optical Instrumentation Engineers, 1996 **Field Guide to Hyperspectral/multispectral Image Processing** Xiuping Jia, 2022 Hyper multispectral imagery in optical remote sensing utilizes wavelengths that range from the visible to the reflective shortwave infrared Inverse processes using machine learning are applied to the spectral profiles recorded for target detection material identification and associated environmental applications which is the main purpose of remote sensing This Field Guide covers the fundamentals of remote sensing spectral imaging for image understanding image processing for correction and quality improvement and image analysis for information extraction at subpixel pixel superpixel and image levels including feature mining and feature reduction Basic concepts and fundamental understanding are emphasized to prepare the reader for exploring advanced methods *Multiple-Field Multispectral Imaging Using Wide-Angle Lenses* Ronian Siew, 2018-07-08

Inopticalsolutions Notebooks are concise technical books that offer Ronian Siew s insights into specific topics in optics and optical systems Wide angle lenses possess a characteristic that off axis ray bundles tend to de cluster in front of the first

element of the lens system which enables an array of bandpass filters to be mounted there This allows subareas across a wide field to be imaged through different spectral bands simultaneously and through a shared aperture i e the system s aperture stop Ronian calls this Multiple Field Multispectral MFMS imaging One of the advantages of this approach to spectral imaging is that there is minimal spectral shift of the bandpass through each filter as the central ray within ray bundles from each field is at normal incidence to the filter This also results in minimal astigmatism introduced by the filter This book discusses the optical design of MFMS imaging systems and suggests practical applications Want a feel for the book s content CUT AND PASTE the following link to preview first pages note that the content in the printed book is in BLACK WHITE https://drive.google.com/open?id=1399byNt5VANHuLWeLDA_8CqfCDrKNg8 *Multispectral Imaging and Second Harmonic Generation in Scanning Laser Optical Tomography* Lena Nolte,2019 [Studies in Multispectral Imaging](#) C.
