Networks, Crowds, and Markets David Easley, Jon Kleinberg, 2010-07-19 Are all film stars linked to Kevin Bacon Why do the stock markets rise and fall sharply on the strength of a vague rumour How does gossip spread so quickly Are we all related through six degrees of separation There is a growing awareness of the complex networks that pervade modern society We see them in the rapid growth of the internet the ease of global communication the swift spread of news and information and in the way epidemics and financial crises develop with startling speed and intensity This introductory book on the new science of networks takes an interdisciplinary approach using economics sociology computing information science and applied mathematics to address fundamental questions about the links that connect us and the ways that our decisions can have consequences for others

Combinatorial Optimization and Graph Algorithms Takuro Fukunaga, Ken-ichi Kawarabayashi, 2017-10-02 Covering network designs discrete convex analysis facility location and clustering problems matching games and parameterized complexity this book discusses theoretical aspects of combinatorial optimization and graph algorithms Contributions are by renowned researchers who attended NII Shonan meetings on this essential topic The collection contained here provides readers with the outcome of the authors research and productive meetings on this dynamic area ranging from computer science and mathematics to operations research Networks are ubiquitous in today's world the Web online social networks and search and query click logs can lead to a graph that consists of vertices and edges Such networks are growing so fast that it is essential to design algorithms to work for these large networks Graph algorithms comprise an area in computer science that works to design efficient algorithms for networks Here one can work on theoretical or practical problems where implementation of an algorithm for large networks is needed In two of the chapters recent results in graph matching games and fixed parameter tractability are surveyed Combinatorial optimization is an intersection of operations research and mathematics especially discrete mathematics which deals with new questions and new problems attempting to find an optimum object from a finite set of objects Most problems in combinatorial optimization are not tractable i.e. NP hard Therefore it is necessary to design an approximation algorithm for them To tackle these problems requires the development and combination of ideas and techniques from diverse mathematical areas including complexity theory algorithm theory and matroids as well as graph theory combinatorics convex and nonlinear optimization and discrete and convex geometry Overall the book presents recent progress in facility location network design and discrete convex analysis
