frequently called upon to interpret incomplete designs in order to determine the intentions of the designer so that contractors may be fully informed when compiling their tenders

Managing Measurement Risk in Building and Civil Engineering will help all those who use measurement in their work or deal with the output from the measurement process to understand not only the ins and outs of measuring construction work but also the relationship that measurement has with contracts procurement claims and post contract control in construction

The book is for quantity surveyors engineers and building surveyors but also for site engineers required to record and measure events on site with a view to establishing entitlement to variations extras and contractual claims

The book focuses on the various practical uses of measurement in a day to day construction context and provides guidance on how to apply quantity surveying conventions in the many different circumstances encountered in practice

A strong emphasis is placed on measurement in a risk management context as opposed to simply taking off quantities

It also explains how to use the various standard methods of measurement in a practical working environment and links methods of measurement with conditions of contract encompassing the contractual issues connected with a variety of procurement methodologies

At the same time the many uses and applications of measurement are recognised in both a main contractor and subcontractor context

Measurement has moved into a new and exciting era of on screen quantification and BIM models but this has changed nothing in terms of the basic principles underlying measurement thoroughness attention to detail good organisation making work auditable and above all understanding the way building and engineering projects are designed and built

This book will help to give you the confidence to both measure and understand measurement risk issues by presenting the subject of measurement in a modern context with a risk management emphasis recognising the interrelationship of measurement with contractual issues including identification of pre and post contract measurement risk issues emphasising the role of measurement in the entirety of the contracting process particularly considering measurement risk implications of both formal and informal tender documentation and common methods of procurement conveying the basic principles of measurement and putting them in an IT context incorporating detailed coverage of NRM1 and NRM2 CESMM4 Manual of Contract Documents for Highway Works and POM I including a comparison of NRM2 with SMM7 and a detailed analysis of changes from CESMM3 to CESMM4 discussing the measurement implications of major main and sub contract conditions JCT NEC3 Infrastructure Conditions and FIDIC providing detailed worked examples and explanations of computer based measurement using a variety of industry standard software packages
