This means that the curriculum is not a neutral, objective set of facts, but a reflection of the dominant ideology of the time. In this sense, the curriculum is a form of power, and it is important to be aware of the ways in which it can be used to control and shape the minds of students.

## CONCLUSION

The curriculum is a complex and contested area of education. It is shaped by a variety of factors, including the values and beliefs of the society in which it is developed, the needs and interests of students, and the demands of the labor market. As a result, the curriculum is not a neutral, objective set of facts, but a reflection of the dominant ideology of the time. It is important to be aware of the ways in which the curriculum can be used to control and shape the minds of students, and to work towards a more democratic and inclusive curriculum that reflects the values and beliefs of all members of society.

## Projective Representations Of Finite Groups:

Projective Representations of Finite Groups Gregory Karpilovsky, **Projective Representations of Finite Groups** How Ngee Ng,1974 **Projective Representations of Finite Groups** Gregory Karpilovsky,1985 This book presents a systematic account of this topic from the classical foundations established by Schur 80 years ago to current advances and developments in the field This work focuses on general methods and builds theory solidly on the study of modules over twisted group algebras and provides a wide range of skill sharpening mathematical techniques applicable to this subject Offers an understanding of projective representations of finite groups for algebraists number theorists mathematical researchers studying modern algebra and theoretical physicists Irreducible Projective Representations of Finite Groups,2000 **Some Contributions to the Theory of Projective Representations of Finite Groups** David Edward Seedhouse,1988 **Extensions and Projective Representations of Finite Groups** S. School of Mathematical Sciences,2006 **Lifting Problems for Projective Representations of Finite Groups Over Number Fields** Hans Opolka,2020 The purpose of this note is to investigate lifting problems for cocycle classes of projective representations of finite groups over a field  $k$  of characteristic 0 and to provide more detailed information in this respect if  $k$  is a number field Some examples are discussed *Some Topics in the Theory of Projective Representations of Finite Groups* Frank Hampton Curphey OATES,1978 The Degrees of Irreducible Projective Representations of Finite Groups R. J. Higgs,1985 Representations of Finite Groups Hirosi Nagao,Yukio Tsushima,2014-05-10 Representations of Finite Groups provides an account of the fundamentals of ordinary and modular representations This book discusses the fundamental theory of complex representations of finite groups Organized into five chapters this book begins with an overview of the basic facts about rings and modules This text then provides the theory of algebras including theories of simple algebras Frobenius algebras crossed products and Schur indices with representation theoretic versions of them Other chapters include a survey of the fundamental theory of modular representations with emphasis on Brauer characters This book discusses as well the module theoretic representation theory due to Green and includes some topics such as Burry Carlson s theorem and Scott modules The final chapter deals with the fundamental results of Brauer on blocks and Fong s theory of covering and includes some approaches to them This book is a valuable resource for readers who are interested in the various approaches to the study of the representations of groups **The Brauer Splitting Theorem and Projective Representations of Finite Groups Over Rings** E. rather different in level and purpose The first part was originally written for quantum chemists It describes the correspondence due to Frobenius between linear representations and characters This is a fundamental result of constant use in mathematics as well as in quantum chemistry or physics I have tried to give proofs as elementary as possible using only the definition of a group and the rudiments of linear algebra The examples Chapter 5 have been chosen from those useful to chemists The second part is a course given in 1966 to second year students of I'Ecole Normale It completes the first on the following points a degrees of representations and integrality properties of characters Chapter 6 b induced representations theorems of Artin and Brauer and applications Chapters 7 11 c rationality questions Chapters 12 and 13 The methods used are those of linear algebra in a wider sense than in the first part group algebras modules noncommutative tensor products semisimple algebras The third part is an introduction to Brauer theory passage from characteristic 0 to characteristic  $p$  and conversely I have freely used the language of abelian categories projective modules Grothendieck groups which is well suited to this sort of question The principal results are a The fact that the decomposition homomorphism is surjective all irreducible representations in characteristic  $p$  can be lifted virtually i e in a suitable Grothendieck group to characteristic 0

*Character Theory of Finite Groups* I. Martin Isaacs, 2006-11-21 Character theory is a powerful tool for understanding finite groups In particular the theory has been a key ingredient in the classification of finite simple groups Characters are also of interest in their own right and their properties are closely related to properties of the structure of the underlying group The book begins by developing the module theory of complex group algebras After the module theoretic foundations are laid in the first chapter the focus is primarily on characters This enhances the accessibility of the material for students which was a major consideration in the writing Also with students in mind a large number of problems are included many of them quite challenging In addition to the development of the basic theory using a cleaner notation than previously a number of more specialized topics are covered with accessible presentations These include projective representations the basics of the Schur index irreducible character degrees and group structure complex linear groups exceptional characters and a fairly extensive introduction to blocks and Brauer characters This is a corrected reprint of the original 1976 version later reprinted by Dover Since 1976 it has become the standard reference for character theory appearing in the bibliography of almost every research paper in the subject It is largely self contained requiring of the reader only the most basic facts of linear algebra group theory Galois theory and ring and module theory

*Representations of \*-Algebras, Locally Compact Groups, and Banach \*-Algebraic Bundles* J. M.G. Fell, R. S. Doran, 1988-04-15 This is an all encompassing and exhaustive exposition of the theory of infinite dimensional Unitary Representations of Locally Compact Groups and its generalization to representations of

Banach algebras The presentation is detailed accessible and self contained except for some elementary knowledge in algebra topology and abstract measure theory In the later chapters the reader is brought to the frontiers of present day knowledge in the area of Mackey normal subgroup analysis and its generalization to the context of Banach Algebraic Bundles
